This report has been prepared for Gurbhakot Municipality as part of the final deliverables of the ward-wise resource mapping assignment. The report is intended to document the process, data sources, methodology, ward-wise mapping outputs, validation, deliverables, use, maintenance, and future updating mechanism of the resource maps and GIS database.

## ACKNOWLEDGEMENT

Moksha Enterprises Pvt. Ltd. would like to express its sincere gratitude to Gurbhakot Municipality, Office of the Municipal Executive, Subhaghat, Surkhet, for entrusting us with the assignment titled “Ward-wise Resource Mapping Work of Gurbhakot Municipality, Subhaghat, Surkhet.”

We are thankful to the Mayor, Deputy Mayor, Chief Administrative Officer, ward chairpersons, ward members, municipal officials, technical section, planning section, and other concerned departments for their valuable coordination, guidance, and support throughout the assignment. Their participation during the municipal orientation, ward visit planning, resource identification, draft map review, validation, and finalization process was essential for successful completion of the work.

We are especially grateful to ward representatives, ward secretaries, local residents, knowledgeable community members, and field-level resource persons who supported the identification of important ward-level resources, local landmarks, settlements, public facilities, road networks, cultural sites, utilities, and other important locations. Their local knowledge helped ensure that the prepared maps reflect the practical understanding of each ward.

We also acknowledge the support of field enumerators and technical staff who assisted in field verification, GPS point collection, data organization, GIS database preparation, map layout design, correction, printing coordination, and installation of map boards.

This final report, together with the ward-wise resource maps, municipality-level resource map, GIS database, and installed map boards, is submitted as part of the final deliverables of the assignment. We hope that the outputs will serve as useful public information tools, planning references, and spatial documentation resources for Gurbhakot Municipality and its ward offices.

## EXECUTIVE SUMMARY

Gurbhakot Municipality assigned Moksha Enterprises Pvt. Ltd. to carry out the Ward-wise Resource Mapping Work of Gurbhakot Municipality, Subhaghat, Surkhet. The main purpose of the assignment was to identify important resources and places in each ward, prepare a structured resource inventory, plot the collected information in GIS-based map layouts, and install public-facing resource map boards at all ward offices and the municipal office.

The assignment was not designed as a detailed research study, sectoral analysis, municipal profiling exercise, or development feasibility study. Its primary focus was practical and visual: to identify what important places, services, facilities, landmarks, settlements, roads, institutions, natural features, and public resources exist in each ward and to present them in a clear, readable, and useful map format for the general public, ward offices, municipal officials, visitors, and planning teams.

The work began with a municipal-level orientation program where the project purpose, scope, methodology, expected data sources, field process, ward coordination requirements, and final deliverables were discussed with municipal leadership, ward representatives, department heads, and technical sections. The orientation helped establish a common understanding that the final map board would not merely be a technical map, but a public information board that could help people understand the location of roads, services, institutions, settlements, landmarks, and available ward-level resources.

After the orientation program, ward visit dates were finalized in coordination with the Municipality and respective ward offices. The consultant team visited each ward and consulted with ward chairpersons, ward representatives, ward staff, and knowledgeable local persons. During the consultations, available ward-level information was reviewed and important resources were identified through discussion. In many cases, Google Earth and base maps were used during the ward-level consultation to point out and mark the locations of resources, landmarks, settlements, roads, public institutions, utilities, and other important places.

For locations that required higher positional accuracy or could not be confidently identified through consultation and map-based discussion, field enumerators and technical team members carried out site visits and collected GPS points. This helped improve the accuracy of selected resource locations and ensured that important features were not missed. The collected information was then brought to the office for data cleaning, filtering, standardization, classification, and GIS database preparation.

For mapping and visualization, the resource points were categorized into different thematic groups. The classification framework was developed based on the project requirements, available data, ward-level inputs, and cartographic suitability. Major categories included educational institutions, government offices, health facilities, landmarks, settlements/tole/basti, religious and cultural sites, utilities, public facilities, natural features, and other locally important resources. OpenStreetMap-based data and other open-source spatial datasets were used as supporting base map references, and a modified OSM-based visualization approach was adopted because it suited the settlement and road network conditions of Gurbhakot Municipality.

After the database and initial map layouts were prepared, draft maps were presented to the Municipality for review and validation. Feedback received from municipal officials, ward

representatives, and local stakeholders was incorporated into the final database and map layouts. Corrections were made in resource names, locations, labels, categories, missing features, and display elements wherever required.

The final outputs of the assignment include ward-wise resource maps for all fourteen wards, one municipality-level resource map, a structured GIS database, print-ready map layouts, and installed map boards at all 14 ward offices and one municipal office. The maps are intended to support public information, local orientation, ward-level planning discussions, municipal reference, and future updating of resource information.

The assignment has created a practical spatial information base for Gurbhakot Municipality. While the prepared maps do not replace detailed sectoral studies or technical feasibility assessments, they provide a strong visual reference of ward-level resources and important places. The map boards can help citizens, visitors, elected representatives, municipal staff, and planning teams understand what exists in each ward, where key facilities are located, and where future improvements or service gaps may need to be discussed.

For long-term usefulness, the Municipality is recommended to maintain and update the GIS database periodically. Ward offices should record new roads, institutions, public facilities, utilities, settlement names, and important landmarks as they emerge. Periodic updates will help keep the resource maps relevant and will allow the Municipality to gradually build a stronger digital spatial information system in the future.

| Final Output                          | Quantity/Status          | Purpose                                                                           |

| 9.6 Final Report.....                                     | 58 |
| 9.7 Handover of Digital and Physical Outputs.....         | 58 |
| CHAPTER 10: USE, MAINTENANCE AND FUTURE UPDATE.....       | 60 |
| 10.1 Practical Use of Resource Map Boards.....            | 60 |
| 10.2 Use of GIS Database by Municipality.....             | 60 |
| 10.3 Recommended Update Mechanism.....                    | 60 |
| 10.4 Role of Ward Offices in Future Updating .....        | 60 |
| 10.5 Data Ownership and Confidentiality .....             | 60 |
| 10.6 Recommendations for Future Digital Integration ..... | 60 |
| CHAPTER 11: CONCLUSION AND RECOMMENDATIONS .....          | 62 |
| 11.1 Conclusion.....                                      | 62 |
| 11.2 Key Recommendations .....                            | 62 |
| 11.3 Way Forward.....                                     | 62 |
| ANNEXES .....                                             | 64 |
| Annex 1: Minutes and Photographs .....                    | 64 |
| Annex 3: Resource Category and Symbology List .....       | 84 |
| ANNEX 3: COLLECTED POI DATA SHEET .....                   | 85 |

# CHAPTER 1: INTRODUCTION

## 1.1 Background of the Assignment

Gurbhakot Municipality is an important local government of Surkhet District in Karnali Province. The municipality consists of diverse settlements, road networks, public institutions, agricultural areas, forest areas, rivers, water sources, community spaces, religious and cultural places, and expanding service centers across its wards. These resources are directly connected with local service delivery, public information, planning, budgeting, coordination, and day-to-day municipal administration.

Although many important resources exist within the municipality, information about these resources is often scattered across municipal offices, ward offices, local records, community knowledge, and informal understanding of local people. In many cases, information about resource locations is available verbally but not properly organized in a spatial format. This creates difficulty for municipal officials, ward representatives, planning teams, visitors, service providers, and citizens to quickly understand where important places and facilities are located.

The absence of clear and public-facing ward-level maps also affects local orientation and communication. Visitors coming to a ward office may not easily know the location of schools, health facilities, settlements, government offices, road links, religious sites, markets, public utilities, and other local resources. Similarly, during planning discussions, elected representatives and officials may need a common visual reference to identify what exists in the ward and what still needs improvement.

To address this need, Gurbhakot Municipality initiated the Ward-wise Resource Mapping Work with the objective of identifying important ward-level resources and presenting them through GIS-based map layouts and public display boards. The assignment was designed to prepare practical, readable, and locally verified resource maps for all wards and one municipality-level overview map.

The key practical output of this assignment is the preparation and installation of map boards in each of the fourteen ward offices and one map board at the municipal office. These map boards are intended to serve as information boards, orientation tools, and planning references for the Municipality, ward offices, local people, and visitors.

## 1.2 Project Context and Need

Local governments require reliable information about the location and distribution of resources within their jurisdiction. For effective planning and public service delivery, it is important to know where schools, health facilities, roads, ward offices, government offices, settlements, markets, bridges, water sources, religious places, community buildings, and other important facilities are located.

In the case of Gurbhakot Municipality, the need for ward-wise resource mapping was linked to several practical requirements. The Municipality and ward offices required clear visual display of important places and resources in each ward. Such maps help people understand the spatial structure of the ward and the relationship between settlements, roads, services, and public institutions.

Ward offices required public-facing information tools that could be installed and used for visitors, residents, service providers, and planning discussions. A properly designed map board can communicate important ward information faster and more clearly than written descriptions alone. Municipal officials and ward representatives also needed a common reference map that could support discussion during ward-level planning, budgeting, infrastructure prioritization, and service gap identification.

There was also a need to convert scattered local knowledge into a structured spatial database. Local people and ward representatives know many important places, but such information becomes more useful when recorded as point data and organized in GIS format. By preparing a GIS database along with printed map boards, this assignment provides both immediate visual outputs and a foundation for future digital updating.

### 1.3 Objectives of the Assignment

The overall objective of the assignment was to identify important ward-level resources within Gurbhakot Municipality and prepare GIS-based ward resource maps and public-facing resource map boards for municipal reference, ward-level information, and planning support.

The specific objectives were to identify and document important resources, facilities, landmarks, settlements, roads, public institutions, natural features, utilities, and other locally important places within each ward; collect general descriptive and location-based information about identified resources through ward consultation, map-based discussion, and field verification where required; prepare a structured resource inventory and organize the collected information into GIS-compatible point data and attribute tables; classify collected resources into suitable thematic categories for clear map presentation and public understanding; prepare GIS-based ward-wise resource maps and one municipality-level overview resource map; design clear and visually understandable map layouts suitable for public display; present draft maps to the Municipality and incorporate feedback and corrections; prepare, print, and install resource map boards in all fourteen ward offices and one municipal office; and submit digital map files, GIS database, final map layouts, and final report to Gurbhakot Municipality.

### 1.4 Scope of the Assignment

The scope of this assignment was focused on ward-wise resource identification, documentation, GIS plotting, map layout preparation, validation, printing, and installation of map boards. The work was carried out across all fourteen wards of Gurbhakot Municipality.

The major scope of work included review of available municipal and ward-level information, consultation with municipal officials and ward representatives, identification of major resources and important places, collection of location information, field verification where necessary, GPS point collection for selected locations, resource categorization, GIS database preparation, map layout design, municipal validation, final correction, map board printing, and installation.

The assignment covered resources and important places such as government offices, ward offices, educational institutions, health facilities, road networks, bridges, markets, religious and cultural sites, settlements, tole/basti names, tourism or landmark locations, water sources, public utilities, community facilities, natural features, and other locally important resources. It also included

preparation of digital outputs, including GIS database files, ward-wise resource layers, printable map layouts, and final map documents.

## 1.5 Limitations of the Assignment

The assignment was carried out as a practical resource mapping and map-board preparation work. Therefore, its limitations must be clearly understood. The mapping focused mainly on important point-based resources and identifiable local features. It did not attempt to map every household, private building, individual shop, or every minor feature within the ward.

Resource locations were collected using a combination of ward consultation, Google Earth-based identification, available base maps, open-source spatial data, and GPS field verification where required. Therefore, the positional accuracy of all points may not be uniform. Points collected directly from the field using GPS are expected to have higher positional reliability than points identified through consultation and visual interpretation.

The assignment did not conduct detailed sectoral analysis of the resources. For example, schools, health facilities, roads, water sources, or public buildings were mapped as locations, but their service quality, capacity, structural condition, technical performance, or investment requirement was not assessed in detail. The maps are not intended for legal boundary settlement, cadastral decision-making, land ownership verification, or engineering design. They are public-facing resource maps prepared for information, orientation, and planning reference.

The map boards represent the resource information available and validated during the project period. As new roads, facilities, institutions, settlements, and utilities develop over time, the GIS database and map layouts should be updated periodically.

## 1.6 Structure of the Report

This final report is organized into eleven chapters and annexes. Chapter 1 introduces the assignment, project context, objectives, scope, limitations, and structure of the report. Chapter 2 explains the understanding of ward-wise resource mapping, its purpose, importance, and distinction from detailed sectoral analysis. Chapter 3 presents the project area and implementation context of Gurbhakot Municipality. Chapter 4 describes the methodology and work process followed during the assignment, including orientation, ward consultation, Google Earth-based identification, field verification, GPS data collection, GIS processing, validation, and final installation.

Chapter 5 presents data sources and resource categories used in the mapping process. Chapter 6 describes the ward-wise resource mapping outputs for all fourteen wards and the municipality-level map. Chapter 7 explains map layout, design, visualization approach, base map selection, symbology, labeling, and cartographic presentation. Chapter 8 discusses validation, correction, and finalization. Chapter 9 presents final deliverables and handover components. Chapter 10 provides guidance on use, maintenance, future updating, data ownership, and possible digital integration. Chapter 11 presents conclusions, key recommendations, and way forward. Annexes provide supporting materials such as resource categories, database structure, inventory summaries, installation photographs, handover checklist, meeting minutes, attendance sheets, and final map layouts.

## CHAPTER 2: UNDERSTANDING OF RESOURCE MAPPING

### 2.1 Concept of Ward-wise Resource Mapping

Resource mapping is a practical method of identifying, locating, classifying, organizing, and presenting important resources and places within a defined geographic area. In the context of this assignment, ward-wise resource mapping refers to the process of identifying important resources within each ward of Gurbhakot Municipality and presenting them in a clear GIS-based map format.

The purpose of ward-wise resource mapping is not limited to producing a technical map. It is a process of converting scattered local knowledge, ward-level information, public records, field observations, and location-based data into a structured spatial form. Through this process, important places and facilities that are known locally can be properly recorded, categorized, mapped, labeled, and displayed for wider use.

In Gurbhakot Municipality, ward-wise resource mapping was carried out to show the spatial distribution of important resources such as educational institutions, health facilities, government offices, settlements, tole/basti names, public buildings, religious and cultural sites, road networks, bridges, markets, utilities, landmarks, natural features, and other locally important places. These resources were mapped mainly as point data and shown on ward-level map layouts with suitable base map information, symbols, labels, and legends.

The approach adopted for this assignment combines local knowledge and GIS technology. Ward representatives and knowledgeable local persons helped identify important places, while the technical team converted that information into GIS layers and map layouts. Where necessary, selected locations were verified in the field using GPS-enabled devices to improve positional accuracy. Therefore, ward-wise resource mapping in this project can be understood as a bridge between local knowledge and technical mapping.

### 2.2 Purpose of Public-facing Resource Maps

The resource maps prepared under this assignment are public-facing maps. This means that the maps are designed not only for GIS professionals or technical users, but also for general citizens, visitors, ward officials, elected representatives, municipal staff, service providers, and planning teams.

A public-facing resource map should answer simple but important questions: What important places are located in the ward? Where are schools, health facilities, ward offices, roads, settlements, markets, water sources, religious places, and public facilities? How are these places spatially connected? Which areas have visible resource concentration? Which areas may require future attention?

For this reason, the map layout was designed with readability as a major priority. The purpose was not to load the map with unnecessary technical detail, but to present ward-level information in a way that can be quickly understood by the general public. A good public-facing map should make the ward easier to understand at a glance. In this assignment, the map was treated as a communication tool as much as a technical output.

## 2.3 Importance of Map Boards for Ward Offices

The installation of map boards at ward offices is one of the most important practical outputs of this assignment. A map board placed in front of or within the ward office becomes a permanent visual reference for the ward. Unlike a report that may remain inside an office file, a map board is visible, accessible, and useful in daily public interaction.

For ward offices, map boards are important for several reasons. First, they help visitors understand the ward. A person visiting the ward office can quickly see the location of settlements, roads, institutions, public facilities, and other important places. Second, map boards support local planning. During ward-level planning discussions, elected representatives and municipal staff can refer to the map to discuss road access, service locations, settlement distribution, public facilities, and possible gaps.

Third, map boards strengthen transparency. When important resources and places are displayed publicly, citizens can better understand what exists in their ward. Fourth, map boards preserve local information. Many local names, tole/basti locations, small landmarks, community buildings, religious places, water sources, and local roads may not be clearly available in official records. Once mapped and displayed, such information becomes part of the ward's visible public record.

## 2.4 Difference between Resource Mapping and Detailed Sectoral Analysis

It is important to clearly distinguish this assignment from a detailed research study, sectoral analysis, feasibility study, municipal profile, or technical assessment. The main objective of this assignment was to identify, locate, classify, map, validate, and display ward-level resources. It was not intended to conduct detailed analysis of each resource.

For example, a school was mapped as an educational institution with its location and name. However, the assignment did not assess the school's student capacity, teacher availability, building condition, educational quality, or future investment requirement. Similarly, a health facility was mapped as a health-related resource, but the assignment did not evaluate its service capacity, equipment status, staffing, medicine availability, or health service performance.

A road was shown as part of the ward-level transport network, but this assignment did not conduct engineering design, pavement condition assessment, traffic analysis, right-of-way verification, or cost estimation. A water source, religious site, community building, market, bridge, settlement, or public utility was mapped for location and public information, but not studied in detail for technical, economic, environmental, or social performance.

This distinction is necessary because resource mapping provides the spatial foundation for understanding where things are located. Detailed sectoral analysis requires separate technical surveys, sector-specific data, detailed measurements, standards-based assessment, and analytical interpretation. The outputs of this assignment should therefore be used as a starting point or reference base for future planning, not as a replacement for detailed sectoral studies.

## 2.5 Expected Use of the Maps and GIS Database

The final maps and GIS database prepared under this assignment are expected to be used by Gurbhakot Municipality, ward offices, municipal technical sections, planning teams, elected representatives, local stakeholders, and the general public.

At the ward level, installed map boards can be used as public information tools. Citizens and visitors can refer to the map to locate important places and understand the basic spatial arrangement of the ward. Ward representatives can use the map during public meetings, ward-level planning discussions, local orientation, and service-related communication.

At the municipal level, the municipality-level resource map provides an overview of the distribution of major resources, road networks, settlements, and public facilities across all wards. It can support municipal-level discussion, inter-ward comparison, planning coordination, and general reference.

The GIS database is an important technical output of the assignment. Unlike printed map boards, the GIS database can be updated, edited, expanded, and reused. It stores resource information in a structured spatial format with attribute data. This makes it useful for future municipal planning, data management, map revision, digital profile development, web-GIS integration, and other spatial information systems.

## CHAPTER 3: PROJECT AREA AND IMPLEMENTATION CONTEXT

### 3.1 Brief Introduction of Gurbhakot Municipality

Gurbhakot Municipality is located in Surkhet District of Karnali Province, Nepal. It is one of the emerging municipalities of the district, with a diverse local setting consisting of settlements, road networks, public institutions, agricultural areas, forest areas, rivers, water sources, community spaces, religious and cultural places, and expanding service centers across its wards.

The municipality includes both rural and semi-urban characteristics. Some areas are relatively accessible and connected through road networks and public service facilities, while other areas have scattered settlements, local roads, natural features, and community-based resources distributed over wider geography. This diversity makes ward-wise spatial documentation important because each ward has its own settlement pattern, accessibility condition, resource distribution, and public service arrangement.

The municipality contains important resources that support local livelihood, service delivery, public administration, mobility, education, health, culture, economic activities, and community development. These include schools, health facilities, ward offices, government service centers, religious sites, markets, roads, bridges, water sources, community buildings, public spaces, forests, agricultural pockets, landmarks, and settlements.

Before this assignment, many of these resources were known through local knowledge, ward records, municipal records, and field familiarity. However, the information was not fully organized into a public-facing, ward-wise GIS-based map format. As a result, there was a practical need to collect, organize, classify, map, validate, and display these resources in a clear spatial format.

### 3.2 Municipal Demographic and Spatial Reference

Available secondary reference information from the open-space and important resource mapping report of Gurbhakot Municipality records the municipal area as 228.62 square kilometers, total population as 48,216, total households as 11,798, male population as 22,183, female population as 26,033, and literacy rate as 82.8 percent. The same reference also presents the municipality as located in the eastern part of Surkhet District, approximately 48 kilometers east of Birendranagar, the capital city of Karnali Province.

These demographic and spatial references are useful for understanding the scale of the municipality and the need for ward-wise information tools. A municipality of this size and population requires maps that are not limited to a central municipal overview. Ward-wise maps are necessary because citizens normally interact with the ward office first, and ward-level information is more useful for daily public service, local planning, and community orientation.

| Indicator        | Reference Value |
|------------------|-----------------|
| Municipal Area   | 228.62 sq. km   |
| Total Population | 48,216          |
| Male Population  | 22,183          |

|                   |        |
|-------------------|--------|
| Female Population | 26,033 |
| Total Households  | 11,798 |
| Literacy Rate     | 82.8%  |
| Number of Wards   | 14     |

*Source note: Municipal demographic values are taken as secondary reference from National Census 2078 reference.*

### 3.3 Ward Structure and Local Setting

Gurbhakot Municipality consists of fourteen wards. Each ward has its own local identity, settlement structure, road access, public facilities, natural resources, and important places. The distribution of resources is not uniform across all wards. Some wards have a higher concentration of public institutions and service facilities, while others are more settlement-based, agriculture-oriented, forest-linked, or naturally defined by terrain, streams, local roads, and dispersed communities.

This variation in ward structure required the mapping process to be carried out separately for each ward. A single municipal-level map alone would not be sufficient to show the practical local details required by ward offices and citizens. For this reason, ward-wise maps were prepared for all fourteen wards, along with one municipality-level overview map.

The local setting of the wards includes administrative features such as ward offices, government offices, service centers, and other public institutions; social service features such as schools, health facilities, community buildings, cooperatives, and public service locations; transport-related features such as roads, junctions, bridges, important routes, and locally known access points; settlement-related features such as tole, basti, village names, and important local landmarks; natural and environmental features such as rivers, streams, water sources, forests, agricultural areas, open spaces, and other natural references; cultural and religious features such as temples, shrines, monasteries, churches, historical places, cremation areas, and locally significant cultural sites; and economic and public-use features such as markets, commercial centers, collection points, public grounds, utilities, and community assets.

### 3.4 Need for Ward-wise Spatial Information

Ward-wise spatial information is important because local development, service delivery, public information, and planning decisions are all connected to location. Knowing that a resource exists is useful, but knowing where it exists makes the information more practical.

In the context of Gurbhakot Municipality, ward-wise spatial information was needed to prepare a clear visual record of important resources and places, support ward offices with public-facing information tools, provide elected representatives and municipal staff with a shared spatial reference during planning discussions, and create a GIS database that can be updated in the future.

Ward-wise maps also help identify visible service distribution. While this assignment does not perform detailed service-gap analysis, the map still allows users to visually observe where resources are concentrated and where fewer mapped resources are visible. This can support future discussion and planning. Spatial information also supports transparency and public awareness, because citizens can better understand their ward and participate more meaningfully in local development discussions.

### 3.5 Target Users of the Resource Map Boards

The resource map boards prepared under this assignment are intended for ward offices, the municipal office, elected representatives, municipal technical and planning sections, general public and local residents, visitors and service seekers, development partners and service providers, and future GIS and digital profile users.

Ward offices are the primary users of the ward-level map boards. The maps can support daily public interaction, local orientation, ward meetings, planning discussions, and communication with citizens. The municipal office can use the municipality-level map as an overview of all wards. Mayor, Deputy Mayor, ward chairpersons, ward members, and other elected representatives can use the maps during planning, prioritization, monitoring, and public consultation.

The maps are also designed to be understandable to ordinary citizens. Local residents can use the map boards to identify settlements, public facilities, roads, schools, health posts, religious sites, markets, utilities, and other important places in their ward. Organizations, contractors, service providers, NGOs, INGOs, and project teams working in the municipality can use the maps as a basic reference for local orientation and coordination.

## CHAPTER 4: METHODOLOGY AND WORK PROCESS

### 4.1 Overall Methodological Framework

The methodology adopted for the Ward-wise Resource Mapping Work of Gurbhakot Municipality was practical, participatory, and GIS-based. The assignment was implemented with the objective of identifying important resources and places within each ward, organizing them into a structured spatial database, preparing readable map layouts, validating the maps with municipal and ward-level stakeholders, and installing final map boards at ward offices and the municipal office.

The methodology was designed according to the actual nature of the assignment. Since the project focused mainly on resource identification, point-data collection, GIS plotting, and public-facing map-board preparation, the work process emphasized local consultation, map-based resource identification, field verification where necessary, GIS data management, and cartographic presentation.

The overall workflow followed municipal-level orientation and project briefing; collection and review of available data and base maps; ward visit planning and coordination with ward offices; ward-level consultation with representatives and knowledgeable local persons; identification of resources and important places using local knowledge, Google Earth, and base maps; field verification and GPS point collection for selected locations; compilation, cleaning, filtering, and standardization of collected data; classification of resource points into suitable categories; preparation of GIS database and attribute structure; design of ward-wise map layouts and municipality-level overview map; internal review of map readability, labeling, symbols, and data consistency; presentation of draft maps to the Municipality for review and validation; incorporation of feedback and correction of names, locations, categories, and missing features; finalization of map layouts; printing, map-board preparation, and installation; and submission of final report, GIS database, digital files, and physical outputs.

### 4.2 Municipal-level Orientation Program

After the contract agreement, the first major activity was the municipal-level orientation program. The orientation program was organized at Gurbhakot Municipality with the participation of municipal leadership, ward chairpersons, ward representatives, department heads, municipal officials, technical section, planning section, and the consultant team.

The purpose of the orientation program was to establish a common understanding of the assignment before beginning ward-level work. The consultant team presented the project objective, scope, methodology, expected data sources, field process, coordination requirements, validation process, and final deliverables. During the orientation, it was clearly communicated that the project was not merely a report preparation task. The main objective was to prepare practical ward-wise resource maps and install map boards that would remain visible and useful in ward offices.

The orientation program also helped clarify the role of ward representatives. Since ward representatives and local stakeholders have direct knowledge of settlements, roads, institutions, landmarks, public facilities, and locally known places, their participation was considered essential for accurate resource identification.

### 4.3 Ward Visit Planning and Coordination

Following the municipal orientation, the consultant team coordinated with the Municipality and ward offices to prepare the ward visit schedule. Since the project covered all fourteen wards, the work required proper sequencing and coordination to ensure availability of ward representatives, local resource persons, and necessary information.

Ward visit planning included communication with ward chairpersons, ward secretaries, ward members, and other concerned persons. The purpose was to ensure that the consultant team could meet people who had good knowledge of the ward's geography, settlements, road network, facilities, landmarks, and resource distribution. The ward visit schedule was finalized in coordination with the Municipality. The team then visited each ward as per the agreed schedule.

### 4.4 Ward-level Consultation and Local Resource Identification

Ward-level consultation was one of the most important components of the methodology. In each ward, the consultant team consulted ward representatives, ward staff, local stakeholders, and knowledgeable people who understood the local topography, settlement pattern, road network, facilities, landmarks, and resource distribution.

The consultation process focused on identifying important places and resources that should be shown on the map board. These included educational institutions, health facilities, government offices, ward offices, settlements, tole/basti names, religious and cultural sites, roads, bridges, water sources, markets, public buildings, community facilities, landmarks, natural features, tourism-related places, and other locally important locations.

The consultation was conducted in an interactive manner. The consultant team asked ward representatives and local participants to identify important places, verify local names, correct existing map information, and suggest missing resources. Local knowledge was especially important for identifying features that may not be properly available in official records or open-source map data.

### 4.5 Use of Google Earth and Base Maps during Ward Consultation

During ward-level consultation, Google Earth and available base maps were used as visual reference tools. This was especially useful because many local representatives and community members could identify places more easily when they were shown satellite imagery or map-based locations.

Google Earth was used to point out the approximate location of landmarks, settlements, institutions, roads, public facilities, and other resources. Ward representatives and knowledgeable local persons helped locate features by visually identifying roads, buildings, open spaces, rivers, settlements, and nearby landmarks.

This approach was practical because it allowed local participants to identify resources directly on a visual map, reduced confusion in local place names and approximate locations, allowed the team to prepare a preliminary spatial location for many resources without physically visiting every single point, and helped identify which places required further field verification.

## 4.6 Field Verification and GPS Point Collection

Field verification was carried out for locations that could not be confidently identified through ward consultation, Google Earth, or available base maps. Field enumerators and technical team members visited selected sites and collected GPS points to improve positional accuracy.

The purpose of field verification was not to conduct a full technical survey of every resource. Rather, it was to verify selected important locations and collect accurate coordinates where needed. This was particularly useful for resources that were newly developed, not visible clearly on satellite imagery, locally important but not mapped, or located in areas where map interpretation was difficult.

During field verification, the team used GPS-enabled devices and field data collection methods to record the location of selected resources. Where applicable, field photographs and supporting observations were also collected. The collected GPS points were later transferred into GIS software and linked with corresponding resource names and categories.

## 4.7 Resource Classification and Category Development

After resource identification and data collection, the collected points were classified into suitable categories. Classification was necessary to organize the data, prepare clear map symbols, maintain consistency across wards, and make the final maps easy to understand.

The classification framework was developed based on project scope, ToR requirements, ward-level inputs, available data, and cartographic needs. Since the final output was a public-facing map board, categories were kept practical and understandable rather than overly technical. Major resource categories included educational institutions, government and public offices, health facilities, settlements and tole/basti, road and transport-related features, religious, cultural and historical resources, economic and market-related resources, public facilities and community resources, utilities and service infrastructure, natural resources and environmental features, landmarks and locally important places, and other resources.

## 4.8 Data Cleaning, Filtering and Standardization

After field and consultation data were collected, the technical team carried out data cleaning, filtering, and standardization at the office. This step was important because raw data collected from different wards, sources, and field teams often contains inconsistencies in spelling, naming, categories, coordinates, duplication, and attribute information.

Data cleaning involved reviewing all collected points, removing duplicate entries, correcting obvious errors, checking incomplete records, standardizing names, and matching resource categories. Local names were carefully reviewed to preserve the identity of tole/basti, landmarks, religious places, institutions, and public facilities.

Data filtering was done to ensure that the final map did not become overcrowded or unreadable. Since the map boards were intended for public display, not every minor feature could be shown with the same importance. The team selected and organized features based on relevance, visibility, ward-level importance, and map readability.

## 4.9 GIS Database Preparation

The cleaned and standardized data were organized into a GIS database. The GIS database is one of the important technical outputs of the assignment because it stores mapped resources in spatial format with attribute information.

The GIS database was prepared in a layer-based structure. Resource points were organized by category and ward. Each point included relevant attribute information such as resource name, resource type, ward number, category, location reference, and other available details. The database also included supporting spatial layers such as ward boundaries, road networks, rivers, base map references, and other relevant map layers.

The GIS database allowed the technical team to manage resource information systematically, prepare ward-wise map layouts, make corrections after validation, and produce final printable outputs. It also provides the Municipality with an editable digital resource inventory that can be updated in the future.

## 4.10 Map Layout Design and Cartographic Preparation

After the GIS database was prepared, the team started map layout design. Map layout design was one of the most important parts of the assignment because the final output had to be visually clear, readable, and suitable for installation as map boards.

The map layout was designed to show the ward image clearly to the general public. The purpose was to help users understand what resources exist in the ward, where they are located, how settlements and roads are distributed, and how important places are spatially connected.

A modified OpenStreetMap-based visualization approach was adopted because it provided a suitable base for showing roads, settlements, public places, and resource points. The base map was adjusted and styled to improve readability and reduce unnecessary visual clutter. Each ward map layout included the main map panel, ward boundary, resource points, road network, labels, legend, scale, north arrow, title, logos, inset/location map, coordinate/reference information, and other necessary cartographic elements.

## 4.11 Draft Map Presentation and Municipal Validation

After draft map layouts were prepared, they were presented to the Municipality for review and validation. This step was essential to ensure that maps reflected local realities and included required corrections before final printing and installation.

During validation, municipal officials, ward representatives, technical staff, and concerned stakeholders reviewed the draft maps. They checked resource names, locations, categories, missing features, labeling, road representation, settlement names, and overall layout readability. Feedback received during validation was recorded and reviewed by the technical team. Corrections were then incorporated into the GIS database and map layouts.

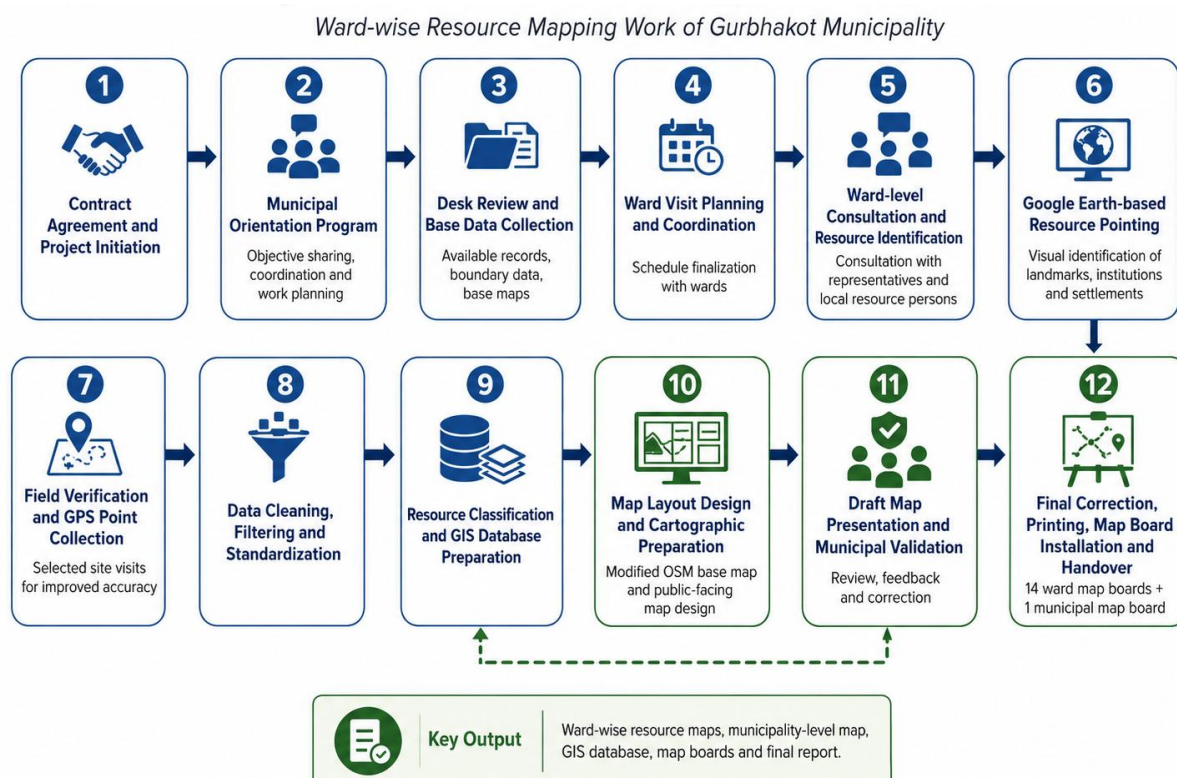

## 4.12 Final Correction, Printing and Installation

After municipal validation, the consultant team carried out final corrections in the GIS database and map layouts. All feedback received from the Municipality and ward representatives was reviewed and incorporated where applicable.

Final corrections included updating resource names, adjusting point locations, adding missing resources, removing duplicate entries, improving labels, correcting legends, refining symbols, and improving overall map readability. After the map layouts were finalized, print-ready files were prepared for map-board production. The map boards were then printed and installed at the designated locations: one map board in each of the fourteen ward offices and one map board at the municipal office.

The installation of the map boards marked the practical completion of the assignment. Unlike a report that is mainly used internally, the installed map boards are visible outputs that can be used by the public, ward offices, and the Municipality.

**Figure 1: Overall Resource Mapping Workflow**

| Step | Activity                                                     | Output                                     |
|------|--------------------------------------------------------------|--------------------------------------------|
| 1    | Municipal orientation and work planning                      | Common understanding and ward coordination |
| 2    | Ward consultation and resource identification                | Preliminary ward-wise resource list        |
| 3    | Google Earth/base map pointing and selected GPS verification | Location-based point data                  |
| 4    | Data cleaning, filtering and classification                  | Standardized resource inventory            |
| 5    | GIS database and map layout preparation                      | Draft ward-wise maps                       |
| 6    | Municipal validation and correction                          | Final map layouts                          |
| 7    | Printing, installation and handover                          | Installed map boards and digital outputs   |

## CHAPTER 5: DATA SOURCES AND RESOURCE CATEGORIES

### 5.1 Primary Data Sources

Primary data refers to information collected directly during implementation of the assignment. Since this project focused on ward-wise resource identification and map-board preparation, primary data was collected mainly through ward-level consultation, local resource identification, GPS-based field verification, and direct coordination with municipal and ward representatives.

The most important primary data source was the local knowledge of ward representatives and people familiar with the ward. Ward chairpersons, ward members, ward staff, local residents, and knowledgeable persons helped identify important places, institutions, settlements, roads, landmarks, public facilities, religious sites, water sources, utilities, and other resources that needed to be shown on the map.

During ward-level consultations, the consultant team recorded resource names, approximate locations, local references, category information, and remarks. In many cases, resource locations were identified using Google Earth and base maps during the consultation itself. For selected locations, field enumerators and technical team members visited the site and collected GPS points.

### 5.2 Secondary Data Sources

Secondary data refers to existing information, maps, records, and spatial datasets that were reviewed and used as supporting material during the assignment. These data sources helped prepare the base map, understand ward boundaries, identify roads and settlements, cross-check resource locations, and prepare the map layout.

The consultant team reviewed available municipal records, ward-level information, existing spatial layers, open-source map data, satellite imagery, and other relevant reference materials. Secondary data was not used as a replacement for local consultation; instead, it was used to support the resource identification and GIS mapping process.

The Open Space and Important Resources Mapping report prepared for Gurbhakot Municipality under the IOM/SIKAI project was used as a reference source for municipal context, ward-wise background, open space information, and resource count references. The data were used only as supporting reference, and the final resource maps under the present assignment are to be updated based on the final GIS database and validation.

### 5.3 OpenStreetMap and Modified Base Map Use

OpenStreetMap was used as one of the major base map references for this assignment. In the context of Gurbhakot Municipality, an OSM-based base map was found suitable because it provided useful road, settlement, and place reference information that could support public-facing resource map preparation.

However, the raw OSM map was not used directly as the final map-board background. The base map was modified and adjusted for better visualization. The purpose of modification was to improve readability, reduce unnecessary clutter, highlight important local features, and create a clean background for displaying resource points.

The map boards required a balance between base map detail and resource-point visibility. If the base map is too heavy, symbols and labels become difficult to read. If the base map is too empty, users may not understand local context. Therefore, the base map was styled to show important reference features such as roads, settlements, rivers, and ward boundaries while keeping resource points clearly visible.

## 5.4 GPS-based Field Data

GPS-based field data was collected for selected resources and locations that required direct verification. This was done by field enumerators and technical team members during field visits. Not every resource point required GPS collection because many points were already identifiable through ward consultation, Google Earth, satellite imagery, and available map references.

GPS-based field data helped improve positional reliability for selected points. It was especially useful for resources such as public facilities, landmarks, water sources, community buildings, important junctions, religious places, and other locations where direct field confirmation was required. The GPS data generally included resource name, resource category, ward number, geographic coordinates, local reference or remarks, and field observation where available.

## 5.5 Ward Consultation-based Point Data

Ward consultation-based point data was the largest and most important data component of this assignment. Many resources and local places are best identified by people who live and work in the ward. Therefore, the consultant team relied strongly on ward representatives and knowledgeable local persons to identify resources.

During ward consultations, participants identified important places by name and location. In many cases, they used Google Earth or base maps to point out the location. The consultant team then recorded the information and converted it into GIS-compatible point data. This type of data helped capture local knowledge that is often missing from formal datasets.

## 5.6 Resource Classification Framework

The collected resource points were organized into a classification framework for mapping and database preparation. Classification was necessary because the map boards needed a clear legend, understandable symbols, and consistent category structure across all wards.

The resource classification framework was developed based on the ToR, proposal, actual field data, ward consultation inputs, and map visualization requirements. The final category structure was designed to be practical for public understanding.

| Broad Category                               | Examples of Mapped Resources                                      | Map Use                                     |
|----------------------------------------------|-------------------------------------------------------------------|---------------------------------------------|
| Administrative and Government Resources      | Municipal office, ward offices, service centers, security offices | Public administration and service reference |
| Educational Resources                        | Schools, campuses, learning centers                               | Education facility location                 |
| Health Resources                             | Health posts, hospitals, clinics, basic health service centers    | Health service access reference             |
| Settlement and Tole/Basti Resources          | Settlement names, village clusters, local residential areas       | Local orientation and place identity        |
| Road and Transport Resources                 | Roads, junctions, bridges, transport nodes                        | Connectivity and movement reference         |
| Religious, Cultural and Historical Resources | Temples, shrines, churches, monasteries, cultural sites           | Community identity and cultural reference   |

|                                              |                                                                          |                                             |
|----------------------------------------------|--------------------------------------------------------------------------|---------------------------------------------|
| Economic and Market Resources                | Markets, commercial centers, collection points                           | Local activity and service center reference |
| Public Facilities and Community Resources    | Community buildings, public grounds, cooperatives, public spaces         | Community use and public asset reference    |
| Utilities and Service Infrastructure         | Water supply, electricity-related features, communication infrastructure | Service infrastructure reference            |
| Natural Resources and Environmental Features | Rivers, streams, forests, open spaces, agricultural pockets              | Natural context and environmental reference |

## 5.7 Major Resource Categories Used in Mapping

The final map layouts used category-wise symbols to show different types of resources. The purpose was to make the maps readable and easy to understand for general users. The major categories used in mapping are described below.

### Administrative and Government Resources

This category includes municipal offices, ward offices, government service centers, security offices, and other public administration-related institutions. These are important because they support governance, service delivery, public administration, and official communication.

### Educational Resources

This category includes schools, campuses, learning centers, and other educational institutions. Educational resources are among the most important public facilities in a ward and are useful reference points for residents and visitors.

### Health Resources

This category includes health posts, clinics, hospitals, basic health service centers, pharmacies where applicable, and other health-related facilities. These locations are important for public service access and emergency reference.

### Settlement and Tole/Basti Resources

This category includes settlements, tole names, basti locations, village names, and local residential clusters. These features help users understand the local structure of the ward and recognize places using local names.

### Road and Transport-related Resources

This category includes road networks, important junctions, bridges, transport nodes, and locally important access routes. Roads and transport features provide the base structure for understanding movement and connectivity within the ward.

### Religious, Cultural and Historical Resources

This category includes temples, monasteries, churches, shrines, cremation areas, historical places, cultural sites, and other places of local cultural importance. These features are important for community identity and public reference.

### **Economic and Market-related Resources**

This category includes markets, commercial centers, collection centers, local production areas, and other economically important places where applicable. These locations help show important activity centers within the ward.

### **Public Facilities and Community Resources**

This category includes community buildings, public grounds, meeting halls, cooperative buildings, public shelters, public toilets, parks, and other community-use facilities. These resources are important for public gatherings, local programs, and community functions.

### **Natural Resources and Environmental Features**

This category includes rivers, streams, ponds, springs, forests, community forests, open spaces, agricultural pockets, and other natural features. These resources provide important environmental and geographic references.

### **Landmarks and Locally Important Places**

This category includes locally recognized points that may not fall clearly under other categories but are important for orientation and local understanding. Such landmarks help people identify locations more easily.

## **5.8 Data Quality Control Measures**

Data quality control was applied throughout the assignment to improve the reliability, consistency, and usability of the final outputs. Since the project used multiple sources of information, quality control was necessary to avoid duplication, incorrect naming, misplaced points, inconsistent categories, and unreadable map layouts.

The major quality control measures included cross-checking resource names with ward representatives, reviewing point locations using Google Earth and base maps, using GPS verification for selected uncertain or important locations, removing duplicate entries from the database, standardizing category names and attribute fields, checking ward-wise organization of points, reviewing spelling of local names, correcting resource locations based on validation feedback, checking symbol and label consistency, reviewing map readability before final printing, ensuring that final resource categories matched the map legend, and maintaining consistency between the GIS database and final map layouts.

The quality control process was not a one-time activity. It was carried out during data collection, office processing, map layout preparation, validation, correction, and finalization. Special attention was given to local names because map users often recognize places by local names. Therefore, corrections suggested by ward representatives and municipal officials were incorporated wherever applicable.

## CHAPTER 6: WARD-WISE RESOURCE MAPPING OUTPUTS

### 6.1 Overview of Ward-wise Mapping Outputs

The ward-wise resource mapping outputs are the main practical deliverables of this assignment. A separate resource map was prepared for each of the fourteen wards of Gurbhakot Municipality, along with one municipality-level overview resource map. These maps were designed to show important ward-level resources, facilities, landmarks, settlements, public institutions, road networks, and locally significant places in a clear and readable format.

The purpose of this chapter is to present the ward-wise mapping outputs in a structured manner. Each ward section provides a brief local background, description of the mapped resource categories, map-board purpose, validation note, and space for inserting the final map layout. The detailed list of mapped resources can be attached in the annex as a ward-wise resource inventory.

The ward maps were prepared as public-facing map boards. Therefore, the emphasis was placed on readability, local relevance, clear symbols, proper labeling, and practical use by ward offices, municipal officials, citizens, visitors, and planning teams. The maps are not intended to replace detailed technical studies, but they provide a visual reference of what important places and resources are located in each ward.

### 6.2 Standard Ward-wise Presentation Format

For consistency, each ward section in this chapter follows a similar structure. This allows the Municipality and readers to understand each ward in the same format. The standard format includes brief ward background, mapped resource categories, important resource and location notes, map-board purpose, validation and finalization note, and final map placeholder.

### 6.3 Reference Ward Resource Summary

The following reference table has been prepared from available secondary information and previous open-space/resource mapping documentation of Gurbhakot Municipality. These figures are useful as background reference only. The final resource counts of this assignment should be updated based on the final GIS database prepared under the present project. The present assignment covers broader resource categories than the IOM open-space report, including settlements/tole/basti, landmarks, utilities, roads, religious/cultural sites, community facilities, markets, natural features, and other locally identified resources.

| Ward | Former Administrative Reference | Boundary Reference                                                                  | Educational Institutions | Health Institutions | Government Offices |
|------|---------------------------------|-------------------------------------------------------------------------------------|--------------------------|---------------------|--------------------|
| 1    | Former Malarani VDC wards 1-5   | East and south: Salyan District; north: Ward 2; west: Ward 5                        | 5                        | 2                   | 1                  |
| 2    | Former Malarani VDC wards 6-9   | East and south: Ward 1; north/west: Wards 3, 4 and 5                                | 6                        | 1                   | 4                  |
| 3    | Former Dharapani VDC wards 1-9  | East: Salyan District; north: Ward 11 and Simta RM; west/south: Wards 1, 2, 4 and 9 | 8                        | 3                   | 2                  |

|   |                                               |                                                                                    |   |   |   |
|---|-----------------------------------------------|------------------------------------------------------------------------------------|---|---|---|
| 4 | Former Sahare VDC wards 4-6                   | East: Ward 3; west: Wards 7 and 8; north: Ward 9; south: Wards 2 and 5             | 8 | 3 | 1 |
| 5 | Former Sahare VDC wards 1-3                   | East: Wards 1 and 2; west: Ward 6; north: Ward 4; south: Salyan District           | 5 | 1 | 1 |
| 6 | Former Subhaghat Municipality wards 15 and 16 | East: Ward 5; west: Bheriganga Municipality; north: Ward 7; south: Salyan District | 7 | 1 | 1 |
| 7 | Former Subhaghat Municipality wards 13 and 14 | East: Ward 4; west: Bheriganga Municipality; north: Wards 8 and 12; south: Ward 6  | 4 | 2 | 1 |

| Ward | Former Administrative Reference               | Boundary Reference                                                | Educational Institutions | Health Institutions | Government Offices |
|------|-----------------------------------------------|-------------------------------------------------------------------|--------------------------|---------------------|--------------------|
| 8    | Former Subhaghat Municipality wards 11 and 12 | East: Wards 4 and 9; west/south: Ward 7; north: Wards 10 and 12   | 4                        | 3                   | 5                  |
| 9    | Former Sahare VDC wards 7-9                   | East: Ward 3; west: Wards 8 and 10; north: Ward 11; south: Ward 4 | 8                        | 2                   | 2                  |
| 10   | Former Subhaghat Municipality ward 3          | East and south: Wards 8 and 9; west: Ward 12; north: Ward 11      | 5                        | 2                   | 3                  |
| 11   | Former Subhaghat Municipality wards 1 and 2   | East/south: Wards 3, 9, 10 and Simta RM; north/west: Ward 12      | 5                        | 1                   | 1                  |

| Ward | Former Administrative Reference              | Boundary Reference                                                                        | Educational Institutions | Health Institutions | Government Offices |
|------|----------------------------------------------|-------------------------------------------------------------------------------------------|--------------------------|---------------------|--------------------|
| 12   | Former Subhaghat Municipality wards 4-6      | East: Wards 10 and 11; west: Wards 13 and 14; north: Simta RM; south: Wards 7 and 8       | 8                        | 2                   | 2                  |
| 13   | Former Subhaghat Municipality wards 7 and 8  | East: Ward 12; west: Lekbesi Municipality; north: Ward 14; south: Bheriganga Municipality | 5                        | 1                   | 5                  |
| 14   | Former Subhaghat Municipality wards 9 and 10 | East/south: Wards 12 and 13; west: Lekbesi Municipality; north: Chingad RM and Simta RM   | 7                        | 4                   | 3                  |

## 6.4 Ward No. 1 Resource Map

### Brief Ward Background

Ward No. 1 of Gurbhakot Municipality is referenced in secondary documentation as being formed from Former Malarani VDC wards 1-5. Its boundary context is described as follows: East and south: Salyan District; north: Ward 2; west: Ward 5. Ward No. 1 lies along the eastern and southern edge of Gurbhakot Municipality and connects with Salyan District. Because of its edge location and dispersed settlement character, the ward map should clearly show settlements, access routes, public facilities, and boundary references. The map board will help local residents and visitors understand where important public places are located and how the ward connects with adjoining areas.

### Secondary Resource Count Reference

| Reference Resource Type  | Count |
|--------------------------|-------|
| Educational institutions | 5     |
| Health institutions      | 2     |
| Government offices       | 1     |

These counts are included as secondary reference only. The current resource mapping assignment covers a broader resource inventory and should be updated with the final GIS database values after completion of map insertion and database finalization.

### Mapped Resource Categories

The Ward No. 1 resource map is structured to include settlements and tole/basti names, road network, educational institutions, health facilities, government and public offices, religious and cultural sites, public spaces, utilities, natural features, landmarks and other locally identified resources. During map preparation, local names and ward-level inputs were treated as important map elements because the final board is intended for public use.

### Important Resource and Location Notes

For Ward No. 1, the final map should present important resources in relation to roads, settlements and ward boundary context. Key local resources should be labeled clearly, and overcrowding should be avoided by using appropriate symbol size, label hierarchy and cartographic generalization. Where the final map contains many closely spaced points, labels may be adjusted or grouped to maintain readability.

### Map-board Purpose

The Ward No. 1 map board is intended to serve as a public-facing information board at the ward office. It will help citizens, visitors, service providers and ward representatives locate important resources and understand the spatial structure of the ward. It will also support ward-level planning, discussion of local priorities, and future updating of the ward resource database.

## 6.5 Ward No. 2 Resource Map

### Brief Ward Background

Ward No. 2 of Gurbhakot Municipality is referenced in secondary documentation as being formed from Former Malarani VDC wards 6-9. Its boundary context is described as follows: East and south: Ward 1; north/west: Wards 3, 4 and 5. Ward No. 2 forms part of the former Malarani area and is connected with Ward Nos. 1, 3, 4 and 5. Its resource map should emphasize the connection between settlements, institutional facilities, road access, and locally known landmarks. The map board is expected to help the ward office present local information in a clear and public-facing manner.

### Secondary Resource Count Reference

| Reference Resource Type  | Count |
|--------------------------|-------|
| Educational institutions | 6     |
| Health institutions      | 1     |
| Government offices       | 4     |

These counts are included as secondary reference only. The current resource mapping assignment covers a broader resource inventory and should be updated with the final GIS database values after completion of map insertion and database finalization.

### Mapped Resource Categories

The Ward No. 2 resource map is structured to include settlements and tole/basti names, road network, educational institutions, health facilities, government and public offices, religious and cultural sites, public spaces, utilities, natural features, landmarks and other locally identified resources. During map preparation, local names and ward-level inputs were treated as important map elements because the final board is intended for public use.

### Important Resource and Location Notes

For Ward No. 2, the final map should present important resources in relation to roads, settlements and ward boundary context. Key local resources should be labeled clearly, and overcrowding should be avoided by using appropriate symbol size, label hierarchy and cartographic generalization. Where the final map contains many closely spaced points, labels may be adjusted or grouped to maintain readability.

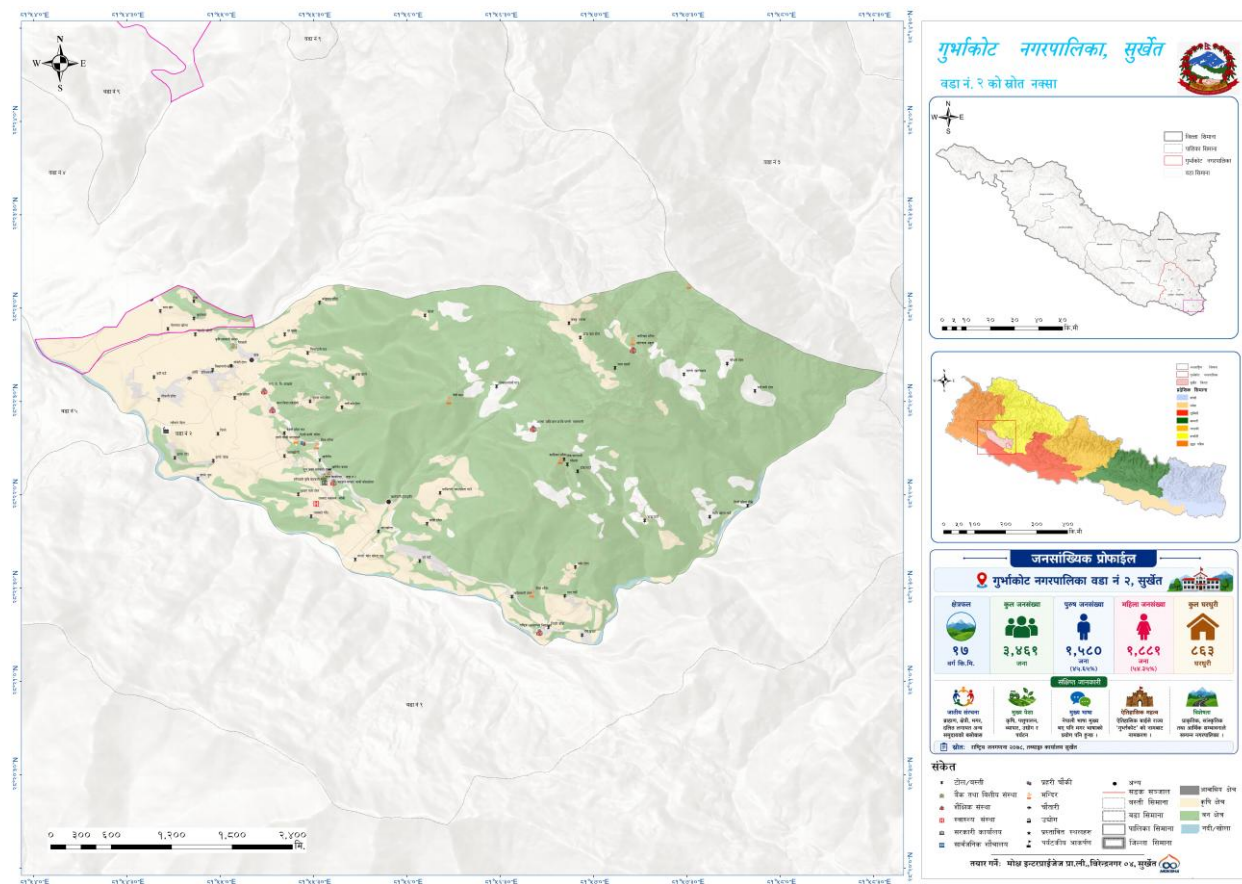

### Map-board Purpose

The Ward No. 2 map board is intended to serve as a public-facing information board at the ward office. It will help citizens, visitors, service providers and ward representatives locate important resources and understand the spatial structure of the ward. It will also support ward-level planning, discussion of local priorities, and future updating of the ward resource database.

### Validation and Finalization Note

The Ward No. 2 map was prepared using ward consultation, available base information, Google Earth-based pointing, selected GPS verification and municipal/ward-level review. Corrections

received during validation are incorporated into the final GIS database and print-ready map layout

## 6.6 Ward No. 3 Resource Map

### Brief Ward Background

Ward No. 3 of Gurbhakot Municipality is referenced in secondary documentation as being formed from Former Dharapani VDC wards 1-9. Its boundary context is described as follows: East: Salyan District; north: Ward 11 and Simta RM; west/south: Wards 1, 2, 4 and 9. Ward No. 3 represents the former Dharapani VDC area and has important external boundary connections with Salyan District and Simta Rural Municipality. Because of its extended geographic setting, the ward map should give proper attention to settlements, road links, service centers, natural features, and boundary reference. The map board will support local orientation and ward-level planning discussion.

### Secondary Resource Count Reference

| Reference Resource Type  | Count |
|--------------------------|-------|
| Educational institutions | 8     |
| Health institutions      | 3     |
| Government offices       | 2     |

These counts are included as secondary reference only. The current resource mapping assignment covers a broader resource inventory and should be updated with the final GIS database values after completion of map insertion and database finalization.

### Mapped Resource Categories

The Ward No. 3 resource map is structured to include settlements and tole/basti names, road network, educational institutions, health facilities, government and public offices, religious and cultural sites, public spaces, utilities, natural features, landmarks and other locally identified resources. During map preparation, local names and ward-level inputs were treated as important map elements because the final board is intended for public use.

### Important Resource and Location Notes

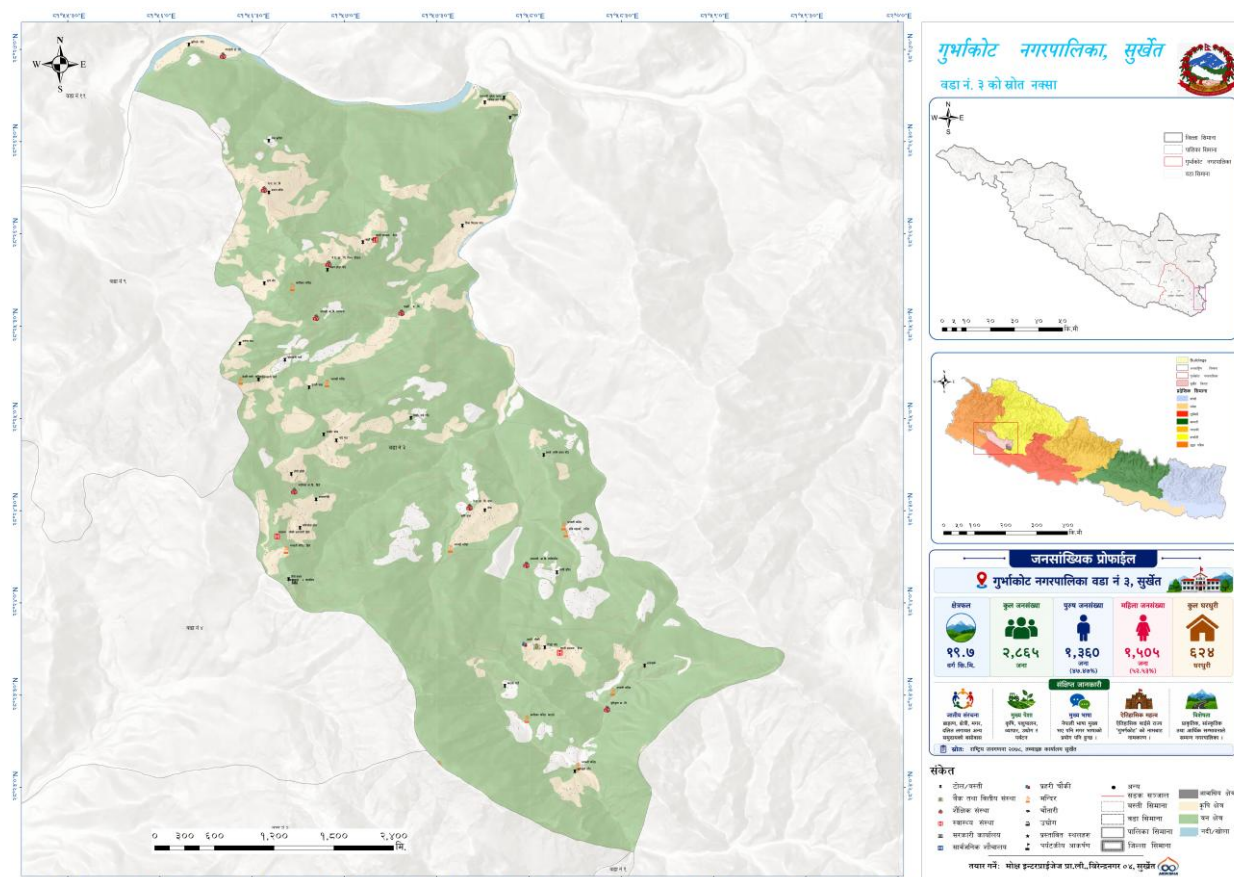

For Ward No. 3, the final map should present important resources in relation to roads, settlements and ward boundary context. Key local resources should be labeled clearly, and overcrowding should be avoided by using appropriate symbol size, label hierarchy and cartographic generalization. Where the final map contains many closely spaced points, labels may be adjusted or grouped to maintain readability.

### Map-board Purpose

The Ward No. 3 map board is intended to serve as a public-facing information board at the ward office. It will help citizens, visitors, service providers and ward representatives locate important resources and understand the spatial structure of the ward. It will also support ward-level planning, discussion of local priorities, and future updating of the ward resource database.

## Validation and Finalization Note

The Ward No. 3 map was prepared using ward consultation, available base information, Google Earth-based pointing, selected GPS verification and municipal/ward-level review. Corrections received during validation are incorporated into the final GIS database and print-ready map layout

## 6.7 Ward No. 4 Resource Map

### Brief Ward Background

Ward No. 4 of Gurbhakot Municipality is referenced in secondary documentation as being formed from Former Sahare VDC wards 4-6. Its boundary context is described as follows: East: Ward 3; west: Wards 7 and 8; north: Ward 9; south: Wards 2 and 5. Ward No. 4 occupies a central connecting position between several wards. Its resource map should clearly show institutional resources, settlements, roads, religious and cultural sites, and public facilities. Because it connects with Ward Nos. 2, 3, 5, 7, 8 and 9, boundary clarity and road visualization are important.

### Secondary Resource Count Reference

| Reference Resource Type  | Count |
|--------------------------|-------|
| Educational institutions | 8     |
| Health institutions      | 3     |
| Government offices       | 1     |

These counts are included as secondary reference only. The current resource mapping assignment covers a broader resource inventory and should be updated with the final GIS database values after completion of map insertion and database finalization.

### Mapped Resource Categories

The Ward No. 4 resource map is structured to include settlements and tole/basti names, road network, educational institutions, health facilities, government and public offices, religious and cultural sites, public spaces, utilities, natural features, landmarks and other locally identified resources. During map preparation, local names and ward-level inputs were treated as important map elements because the final board is intended for public use.

### Important Resource and Location Notes

For Ward No. 4, the final map should present important resources in relation to roads, settlements and ward boundary context. Key local resources should be labeled clearly, and overcrowding should be avoided by using appropriate symbol size, label hierarchy and cartographic generalization. Where the final map contains many closely spaced points, labels may be adjusted or grouped to maintain readability.

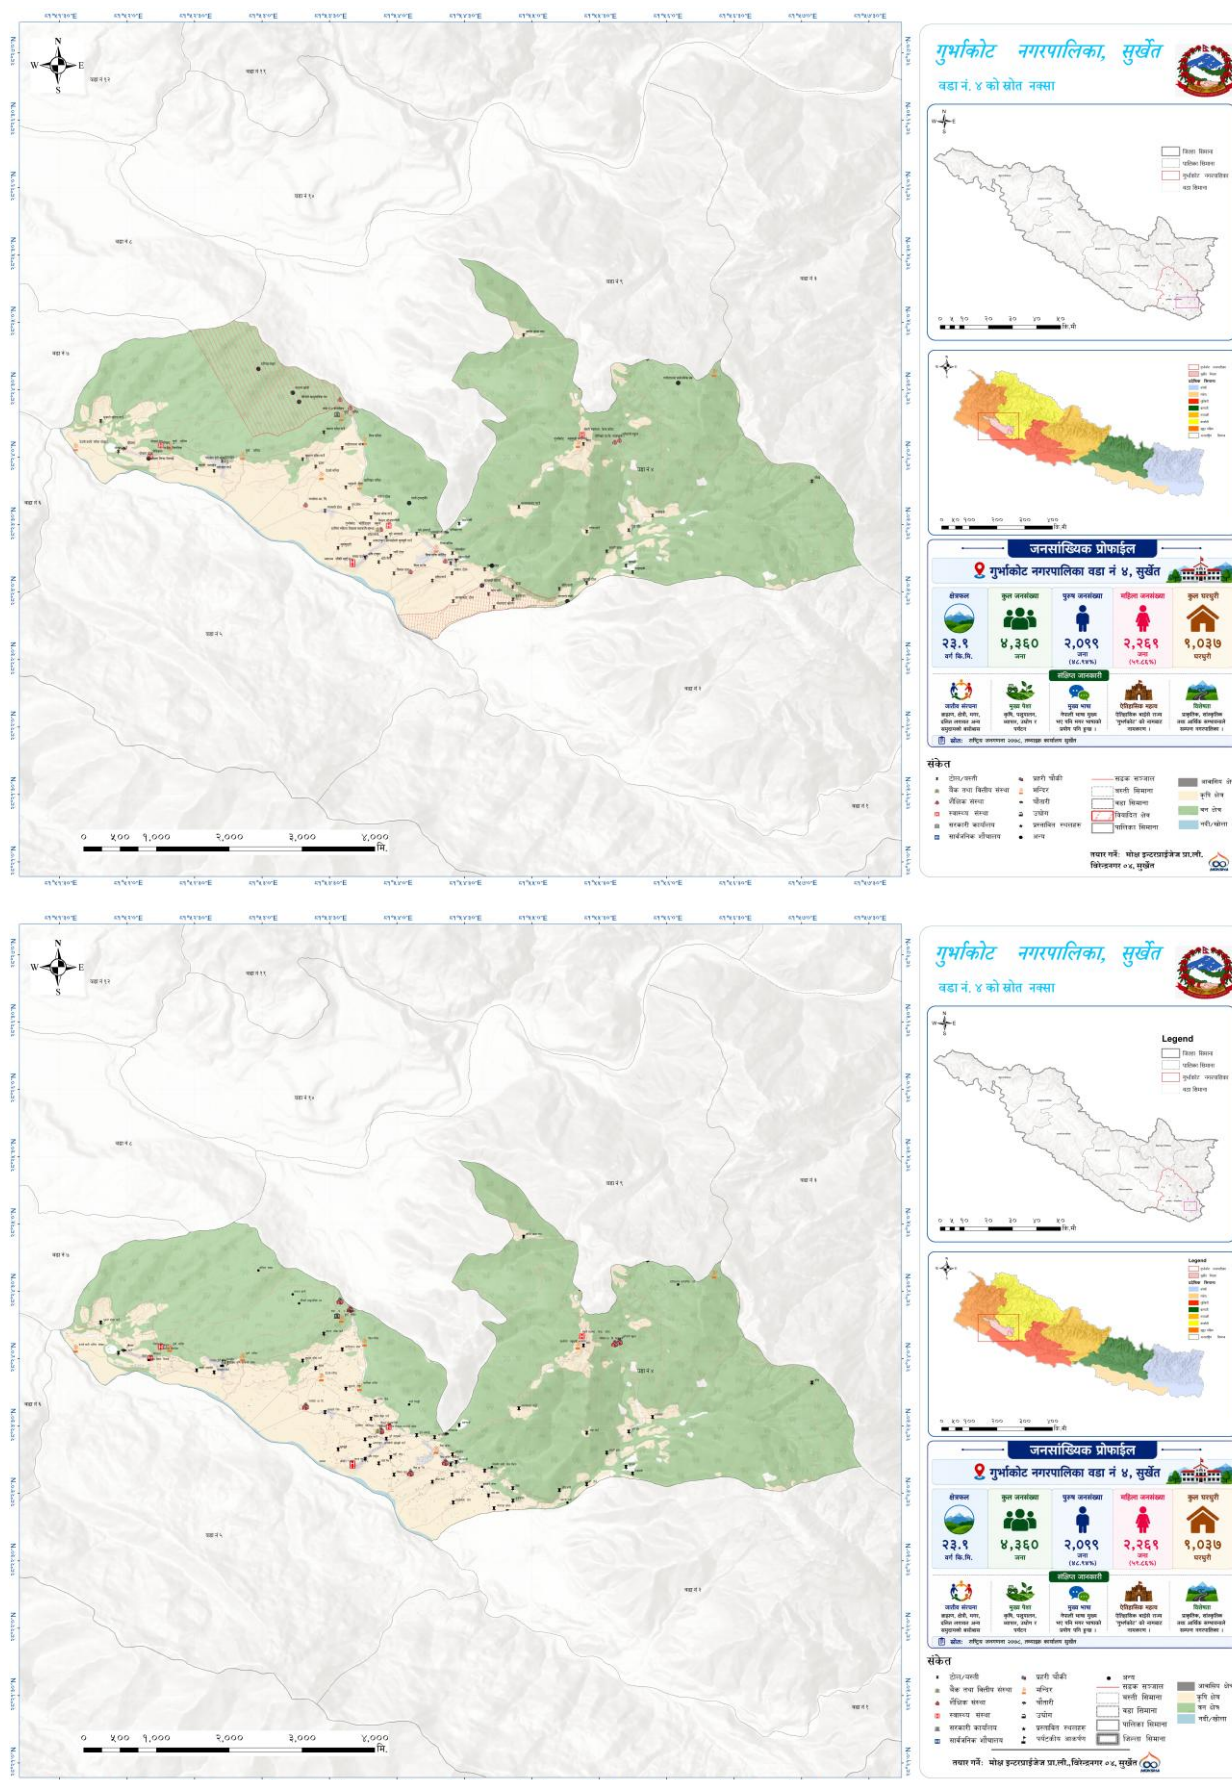

### Map-board Purpose

The Ward No. 4 map board is intended to serve as a public-facing information board at the ward office. It will help citizens, visitors, service providers and ward representatives locate important resources and understand the spatial structure of the ward. It will also support ward-level planning, discussion of local priorities, and future updating of the ward resource database.

### Validation and Finalization Note

The Ward No. 4 map was prepared using ward consultation, available base information, Google Earth-based pointing, selected GPS verification and municipal/ward-level review. Corrections received during validation are incorporated into the final GIS database and print-ready map layout

. two maps are prepared for this ward as some boundary disputes were uncleared and as per recommendation from municipality.

## 6.8 Ward No. 5 Resource Map

### Brief Ward Background

Ward No. 5 of Gurbhakot Municipality is referenced in secondary documentation as being formed from Former Sahare VDC wards 1-3. Its boundary context is described as follows: East: Wards 1 and 2; west: Ward 6; north: Ward 4; south: Salyan District. Ward No. 5 is located toward the southern part of the municipality and connects with Salyan District. The map should show settlements, roads, schools, health resources, natural resources, local landmarks, and public facilities. The map board will provide public orientation and help the ward office discuss local development needs using a spatial reference.

### Secondary Resource Count Reference

| Reference Resource Type  | Count |
|--------------------------|-------|
| Educational institutions | 5     |
| Health institutions      | 1     |
| Government offices       | 1     |

These counts are included as secondary reference only. The current resource mapping assignment covers a broader resource inventory and should be updated with the final GIS database values after completion of map insertion and database finalization.

### Mapped Resource Categories

The Ward No. 5 resource map is structured to include settlements and tole/basti names, road network, educational institutions, health facilities, government and public offices, religious and cultural sites, public spaces, utilities, natural features, landmarks and other locally identified resources. During map preparation, local names and ward-level inputs were treated as important map elements because the final board is intended for public use.

### Important Resource and Location Notes

For Ward No. 5, the final map should present important resources in relation to roads, settlements and ward boundary context. Key local resources should be labeled clearly, and overcrowding should be avoided by using appropriate symbol size, label hierarchy and cartographic generalization. Where the final map contains many closely spaced points, labels may be adjusted or grouped to maintain readability.

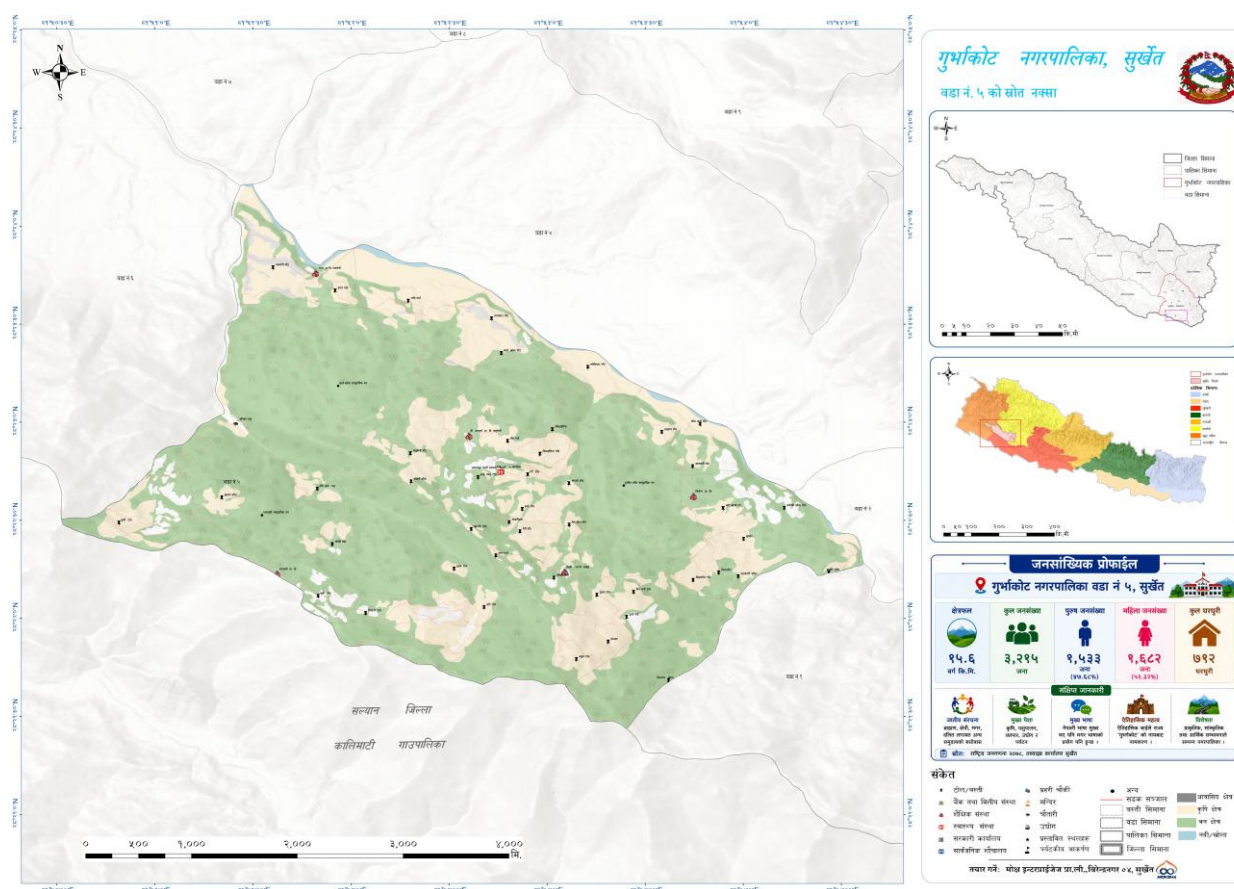

### Map-board Purpose

The Ward No. 5 map board is intended to serve as a public-facing information board at the ward office. It will help citizens, visitors, service providers and ward representatives locate important resources and understand the spatial structure of the ward. It will also support ward-level planning, discussion of local priorities, and future updating of the ward resource database.

### Validation and Finalization Note

The Ward No. 5 map was prepared using ward consultation, available base information, Google Earth-based pointing, selected GPS verification and municipal/ward-level review. Corrections

received during validation are incorporated into the final GIS database and print-ready map layout

## 6.9 Ward No. 6 Resource Map

### Brief Ward Background

Ward No. 6 of Gurbhakot Municipality is referenced in secondary documentation as being formed from Former Subhaghat Municipality wards 15 and 16. Its boundary context is described as follows: East: Ward 5; west: Bheriganga Municipality; north: Ward 7; south: Salyan District. Ward No. 6 is linked with Ward No. 5, Ward No. 7, Bheriganga Municipality and Salyan District. It includes important access routes and locally known public spaces. The resource map should clearly show its inter-municipal and inter-district boundary context, public facilities, road access, and settlement distribution.

### Secondary Resource Count Reference

| Reference Resource Type  | Count |
|--------------------------|-------|
| Educational institutions | 7     |
| Health institutions      | 1     |
| Government offices       | 1     |

These counts are included as secondary reference only. The current resource mapping assignment covers a broader resource inventory and should be updated with the final GIS database values after completion of map insertion and database finalization.

### Mapped Resource Categories

The Ward No. 6 resource map is structured to include settlements and tole/basti names, road network, educational institutions, health facilities, government and public offices, religious and cultural sites, public spaces, utilities, natural features, landmarks and other locally identified resources. During map preparation, local names and ward-level inputs were treated as important map elements because the final board is intended for public use.

### Important Resource and Location Notes

For Ward No. 6, the final map should present important resources in relation to roads, settlements and ward boundary context. Key local resources should be labeled clearly, and overcrowding should be avoided by using appropriate symbol size, label hierarchy and cartographic generalization. Where the final map contains many closely spaced points, labels may be adjusted or grouped to maintain readability.

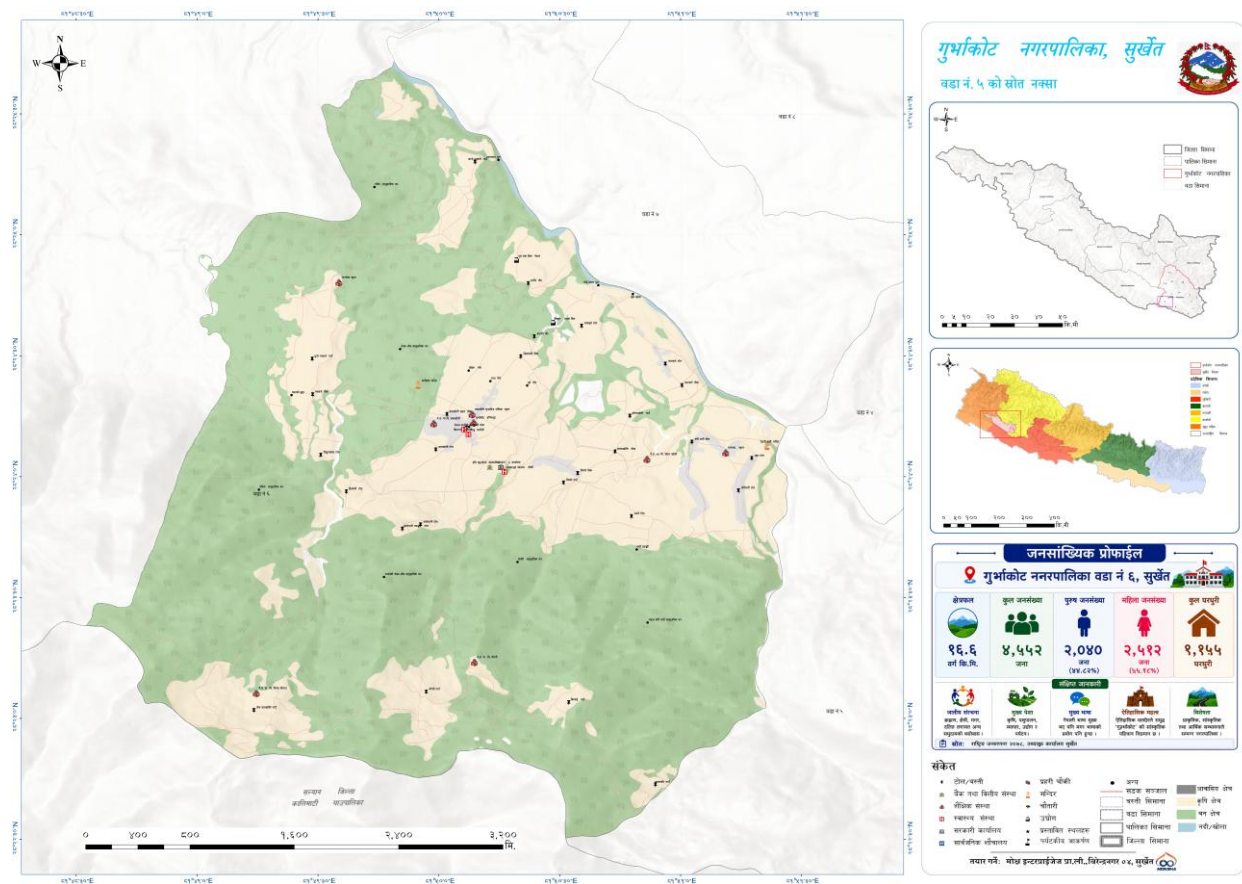

### Map-board Purpose

The Ward No. 6 map board is intended to serve as a public-facing information board at the ward office. It will help citizens, visitors, service providers and ward representatives locate important resources and understand the spatial structure of the ward. It will also support ward-level planning, discussion of local priorities, and future updating of the ward resource database.

### Validation and Finalization Note

The Ward No. 6 map was prepared using ward consultation, available base information, Google Earth-based pointing, selected GPS verification and municipal/ward-level review. Corrections

received during validation are incorporated into the final GIS database and print-ready map layout

## 6.10 Ward No. 7 Resource Map

### Brief Ward Background

Ward No. 7 of Gurbhakot Municipality is referenced in secondary documentation as being formed from Former Subhaghat Municipality wards 13 and 14. Its boundary context is described as follows: East: Ward 4; west: Bheriganga Municipality; north: Wards 8 and 12; south: Ward 6. Ward No. 7 has important connection with Bheriganga Municipality and multiple wards of Gurbhakot Municipality. The ward includes settlements, institutions, community resources and open/public spaces that are important for local orientation. The map board will support both ward office use and public understanding of the local resource structure.

### Secondary Resource Count Reference

| Reference Resource Type  | Count |
|--------------------------|-------|
| Educational institutions | 4     |
| Health institutions      | 2     |
| Government offices       | 1     |

These counts are included as secondary reference only. The current resource mapping assignment covers a broader resource inventory and should be updated with the final GIS database values after completion of map insertion and database finalization.

### Mapped Resource Categories

The Ward No. 7 resource map is structured to include settlements and tole/basti names, road network, educational institutions, health facilities, government and public offices, religious and cultural sites, public spaces, utilities, natural features, landmarks and other locally identified resources. During map preparation, local names and ward-level inputs were treated as important map elements because the final board is intended for public use.

### Important Resource and Location Notes

For Ward No. 7, the final map should present important resources in relation to roads, settlements and ward boundary context. Key local resources should be labeled clearly, and overcrowding should be avoided by using appropriate symbol size, label hierarchy and cartographic generalization. Where the final map contains many closely spaced points, labels may be adjusted or grouped to maintain readability.

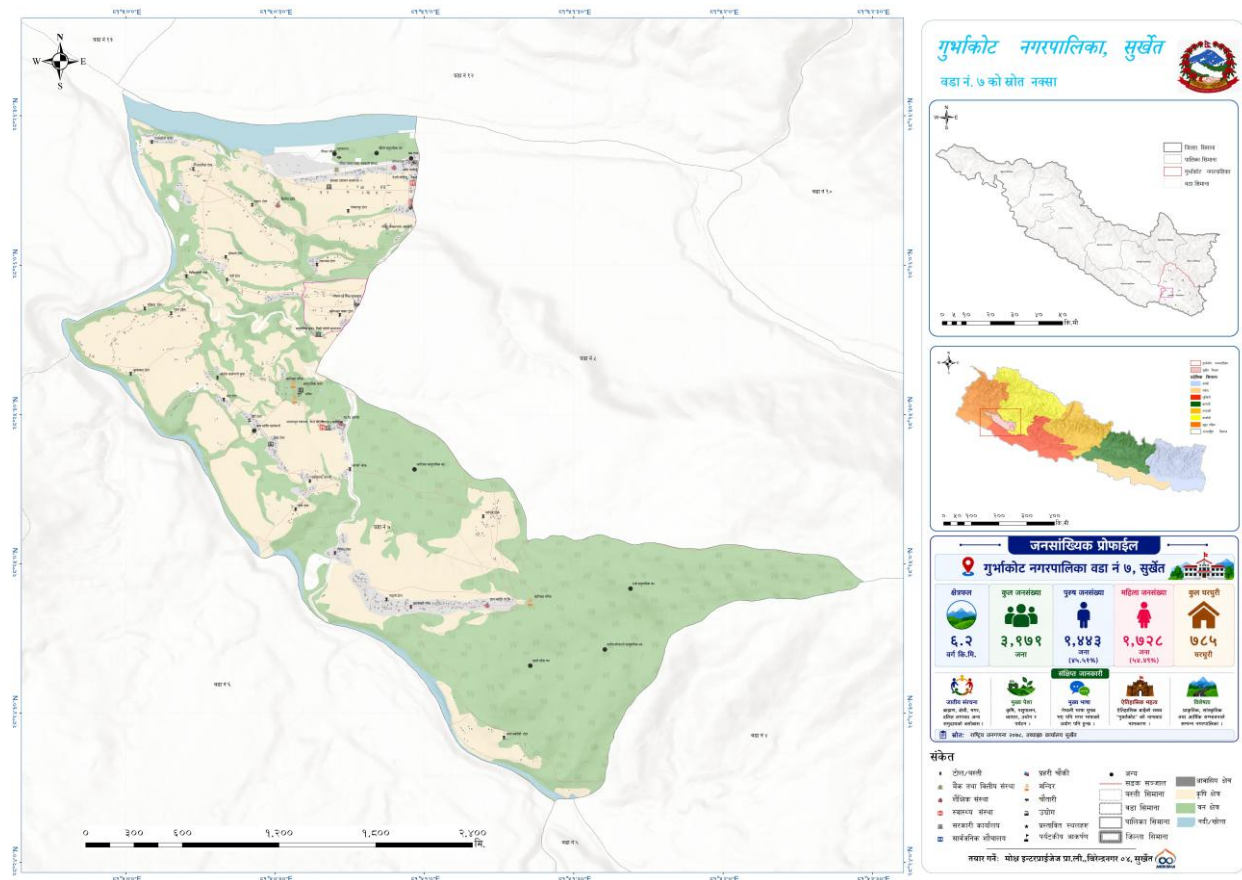

### Map-board Purpose

The Ward No. 7 map board is intended to serve as a public-facing information board at the ward office. It will help citizens, visitors, service providers and ward representatives locate important resources and understand the spatial structure of the ward. It will also support ward-level planning, discussion of local priorities, and future updating of the ward resource database.

### Validation and Finalization Note

The Ward No. 7 map was prepared using ward consultation, available base information, Google Earth-based pointing, selected GPS verification and municipal/ward-level review. Corrections

received during validation are incorporated into the final GIS database and print-ready map layout

## 6.11 Ward No. 8 Resource Map

### Brief Ward Background

Ward No. 8 of Gurbhakot Municipality is referenced in secondary documentation as being formed from Former Subhaghat Municipality wards 11 and 12. Its boundary context is described as follows: East: Wards 4 and 9; west/south: Ward 7; north: Wards 10 and 12. Ward No. 8 includes important service facilities and is connected with several central wards. Reference data indicates a comparatively higher number of government offices and health resources compared to many other wards. The map layout should balance institutional symbols, settlement labels, roads, and public resource points so that the final board remains readable.

### Secondary Resource Count Reference

| Reference Resource Type  | Count |
|--------------------------|-------|
| Educational institutions | 4     |
| Health institutions      | 3     |
| Government offices       | 5     |

These counts are included as secondary reference only. The current resource mapping assignment covers a broader resource inventory and should be updated with the final GIS database values after completion of map insertion and database finalization.

### Mapped Resource Categories

The Ward No. 8 resource map is structured to include settlements and tole/basti names, road network, educational institutions, health facilities, government and public offices, religious and cultural sites, public spaces, utilities, natural features, landmarks and other locally identified resources. During map preparation, local names and ward-level inputs were treated as important map elements because the final board is intended for public use.

### Important Resource and Location Notes

For Ward No. 8, the final map should present important resources in relation to roads, settlements and ward boundary context. Key local resources should be labeled clearly, and overcrowding should be avoided by using appropriate symbol size, label hierarchy and cartographic generalization. Where the final map contains many closely spaced points, labels may be adjusted or grouped to maintain readability.

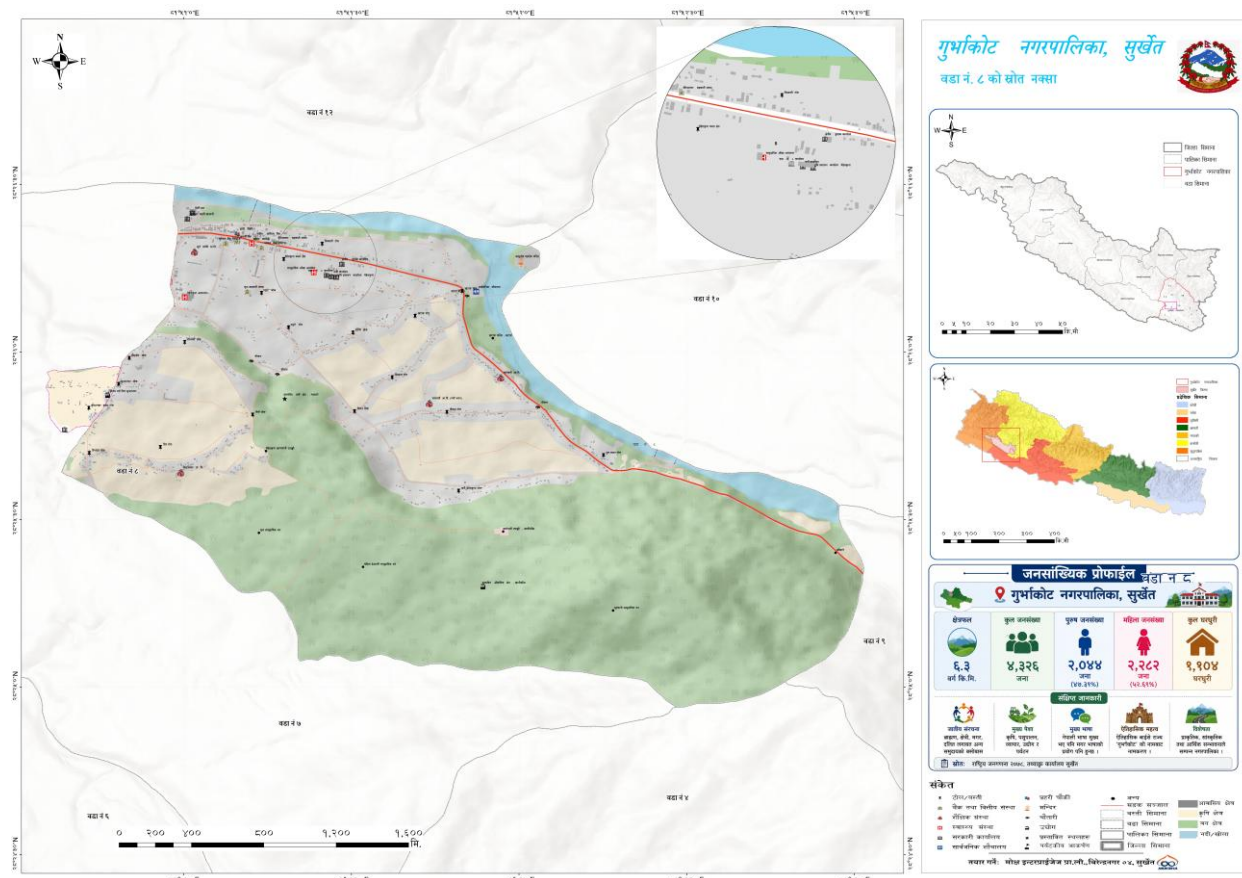

### Map-board Purpose

The Ward No. 8 map board is intended to serve as a public-facing information board at the ward office. It will help citizens, visitors, service providers and ward representatives locate important resources and understand the spatial structure of the ward. It will also support ward-level planning, discussion of local priorities, and future updating of the ward resource database.

### Validation and Finalization Note

The Ward No. 8 map was prepared using ward consultation, available base information, Google Earth-based pointing, selected GPS verification and municipal/ward-level review. Corrections

received during validation are incorporated into the final GIS database and print-ready map layout

## 6.12 Ward No. 9 Resource Map

### Brief Ward Background

Ward No. 9 of Gurbhakot Municipality is referenced in secondary documentation as being formed from Former Sahare VDC wards 7-9. Its boundary context is described as follows: East: Ward 3; west: Wards 8 and 10; north: Ward 11; south: Ward 4. Ward No. 9 occupies a connecting position between eastern, central and northern wards. It includes educational resources, health facilities, public offices, settlements, and important road links. The ward map should show how local resources are arranged in relation to access routes and surrounding wards.

### Secondary Resource Count Reference

| Reference Resource Type  | Count |
|--------------------------|-------|
| Educational institutions | 8     |
| Health institutions      | 2     |
| Government offices       | 2     |

These counts are included as secondary reference only. The current resource mapping assignment covers a broader resource inventory and should be updated with the final GIS database values after completion of map insertion and database finalization.

### Mapped Resource Categories

The Ward No. 9 resource map is structured to include settlements and tole/basti names, road network, educational institutions, health facilities, government and public offices, religious and cultural sites, public spaces, utilities, natural features, landmarks and other locally identified resources. During map preparation, local names and ward-level inputs were treated as important map elements because the final board is intended for public use.

### Important Resource and Location Notes

For Ward No. 9, the final map should present important resources in relation to roads, settlements and ward boundary context. Key local resources should be labeled clearly, and overcrowding should be avoided by using appropriate symbol size, label hierarchy and cartographic generalization. Where the final map contains many closely spaced points, labels may be adjusted or grouped to maintain readability.

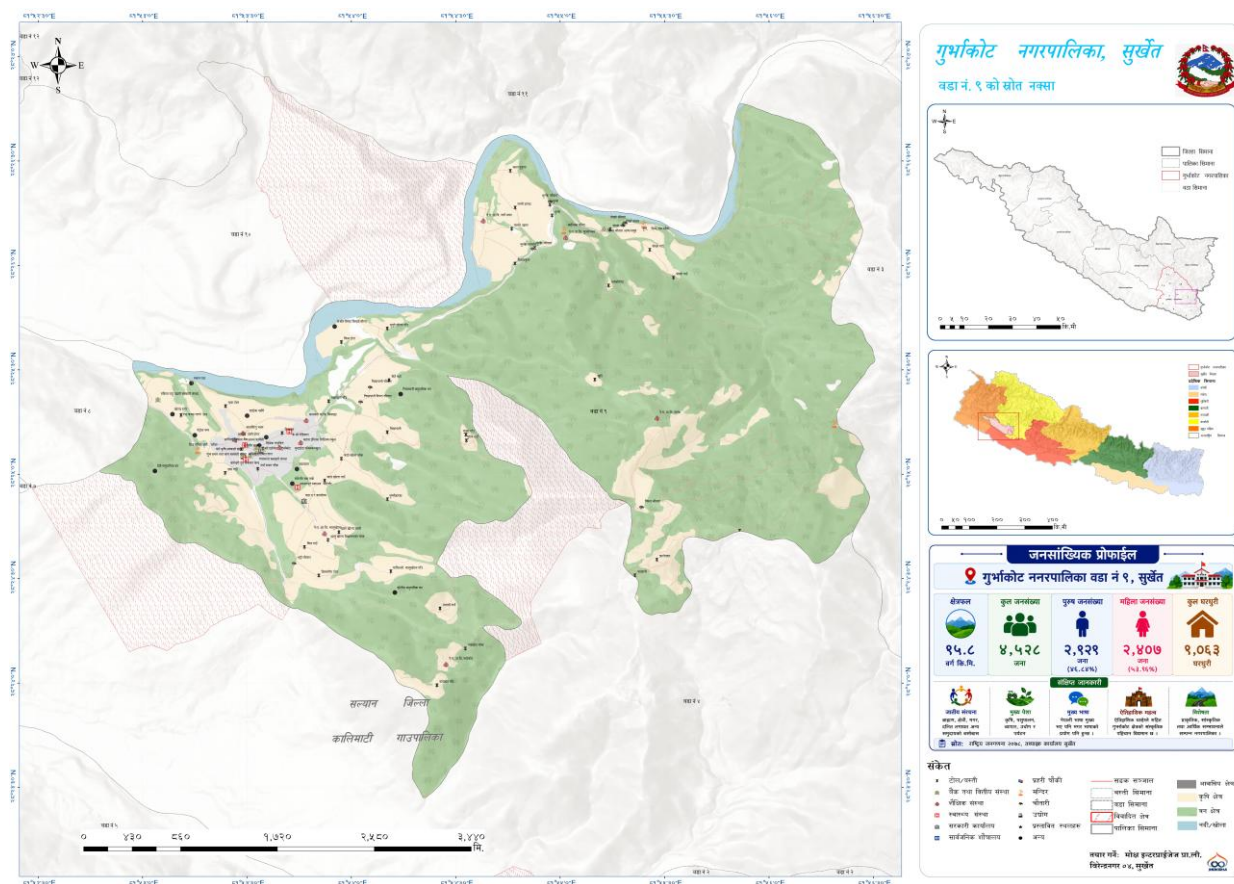

### Map-board Purpose

The Ward No. 9 map board is intended to serve as a public-facing information board at the ward office. It will help citizens, visitors, service providers and ward representatives locate important resources and understand the spatial structure of the ward. It will also support ward-level planning, discussion of local priorities, and future updating of the ward resource database.

### Validation and Finalization Note

The Ward No. 9 map was prepared using ward consultation, available base information, Google Earth-based pointing, selected GPS verification and municipal/ward-level review. Corrections received during validation are incorporated into the final GIS database and print-ready map layout

. For this ward we have prepared two separate maps showing boundary disputed areas and one with boundary from land use data.

## 6.13 Ward No. 10 Resource Map

### Brief Ward Background

Ward No. 10 of Gurbhakot Municipality is referenced in secondary documentation as being formed from Former Subhaghat Municipality ward 3. Its boundary context is described as follows: East and south: Wards 8 and 9; west: Ward 12; north: Ward 11. Ward No. 10 is centrally connected with Ward Nos. 8, 9, 11 and 12. Its map should emphasize settlement names, road network, public service locations, government offices, educational institutions, health facilities, and local landmarks. The map board will help the ward office communicate local information clearly to residents and visitors.

### Secondary Resource Count Reference

| Reference Resource Type  | Count |
|--------------------------|-------|
| Educational institutions | 5     |
| Health institutions      | 2     |
| Government offices       | 3     |

These counts are included as secondary reference only. The current resource mapping assignment covers a broader resource inventory and should be updated with the final GIS database values after completion of map insertion and database finalization.

### Mapped Resource Categories

The Ward No. 10 resource map is structured to include settlements and tole/basti names, road network, educational institutions, health facilities, government and public offices, religious and cultural sites, public spaces, utilities, natural features, landmarks and other locally identified resources. During map preparation, local names and ward-level inputs were treated as important map elements because the final board is intended for public use.

### Important Resource and Location Notes

For Ward No. 10, the final map should present important resources in relation to roads, settlements and ward boundary context. Key local resources should be labeled clearly, and overcrowding should be avoided by using appropriate symbol size, label hierarchy and cartographic generalization. Where the final map contains many closely spaced points, labels may be adjusted or grouped to maintain readability.

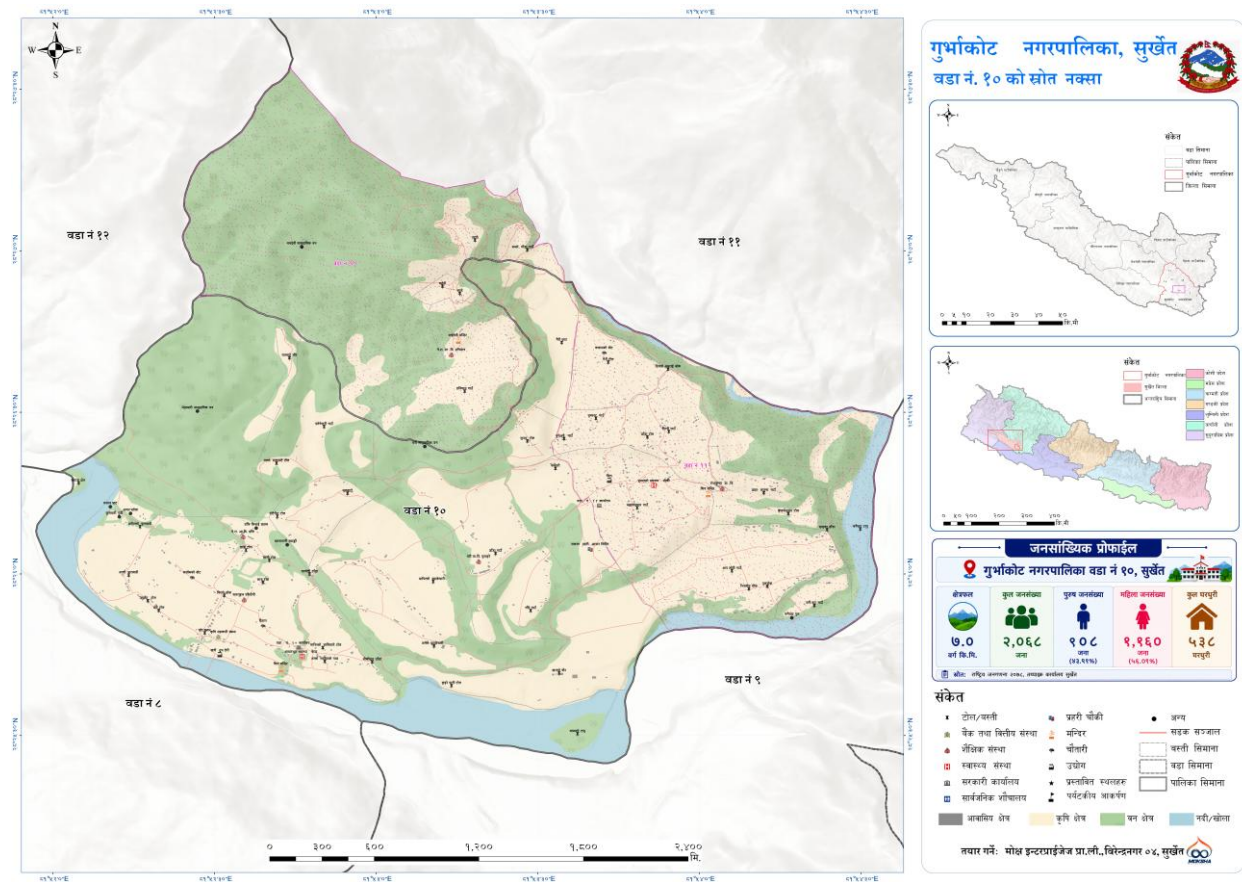

### Map-board Purpose

The Ward No. 10 map board is intended to serve as a public-facing information board at the ward office. It will help citizens, visitors, service providers and ward representatives locate important resources and understand the spatial structure of the ward. It will also support ward-level planning, discussion of local priorities, and future updating of the ward resource database.

### Validation and Finalization Note

The Ward No. 10 map was prepared using ward consultation, available base information, Google Earth-based pointing, selected GPS verification and municipal/ward-level review. Corrections

received during validation are incorporated into the final GIS database and print-ready map layout

## 6.14 Ward No. 11 Resource Map

### Brief Ward Background

Ward No. 11 of Gurbhakot Municipality is referenced in secondary documentation as being formed from Former Subhaghat Municipality wards 1 and 2. Its boundary context is described as follows: East/south: Wards 3, 9, 10 and Simta RM; north/west: Ward 12. Ward No. 11 connects with Ward Nos. 3, 9, 10, 12 and Simta Rural Municipality. Because of this mixed boundary context, the map should carefully present local resources, access routes, settlements and natural features. The map board will support orientation, public service reference and future ward planning.

### Secondary Resource Count Reference

| Reference Resource Type  | Count |
|--------------------------|-------|
| Educational institutions | 5     |
| Health institutions      | 1     |
| Government offices       | 1     |

These counts are included as secondary reference only. The current resource mapping assignment covers a broader resource inventory and should be updated with the final GIS database values after completion of map insertion and database finalization.

### Mapped Resource Categories

The Ward No. 11 resource map is structured to include settlements and tole/basti names, road network, educational institutions, health facilities, government and public offices, religious and cultural sites, public spaces, utilities, natural features, landmarks and other locally identified resources. During map preparation, local names and ward-level inputs were treated as important map elements because the final board is intended for public use.

### Important Resource and Location Notes

For Ward No. 11, the final map should present important resources in relation to roads, settlements and ward boundary context. Key local resources should be labeled clearly, and overcrowding should be avoided by using appropriate symbol size, label hierarchy and cartographic generalization. Where the final map contains many closely spaced points, labels may be adjusted or grouped to maintain readability.

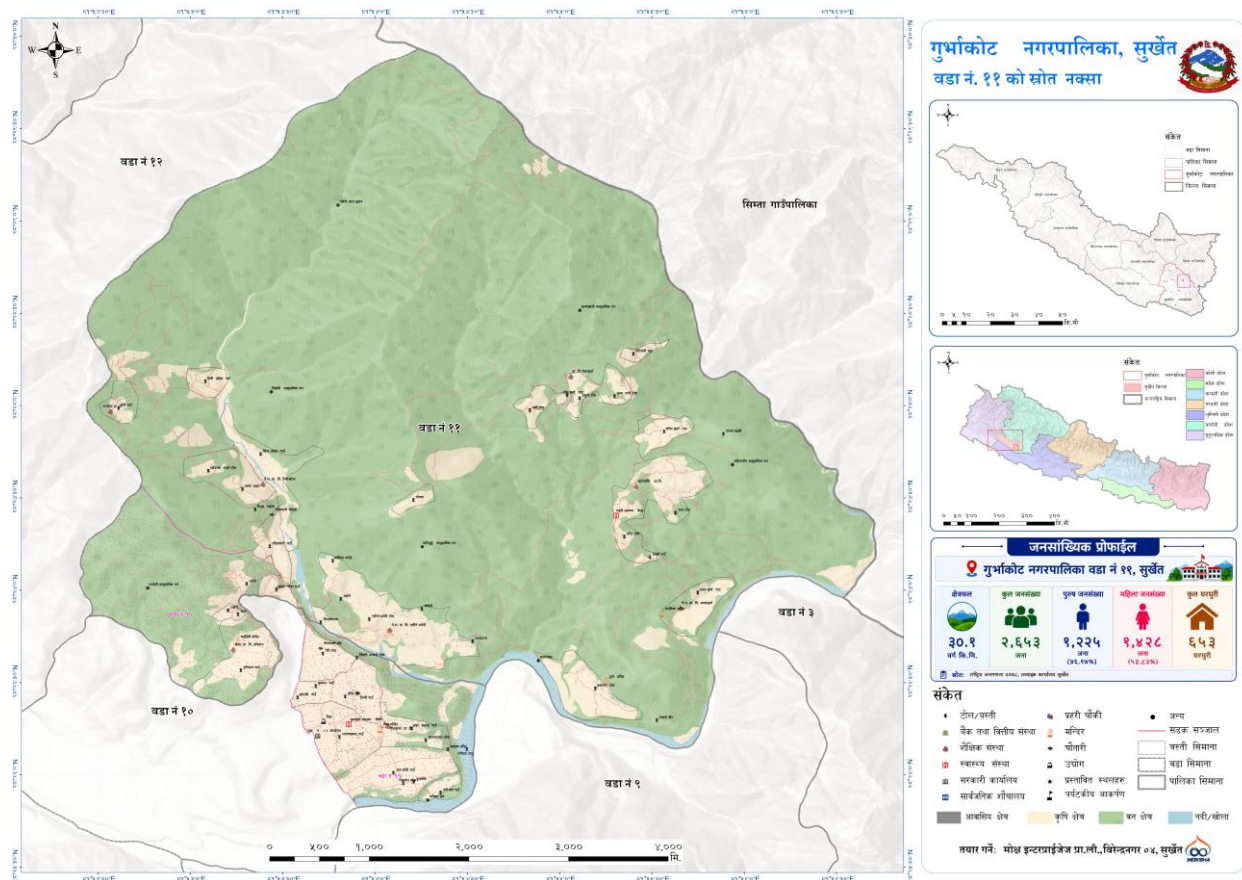

### Map-board Purpose

The Ward No. 11 map board is intended to serve as a public-facing information board at the ward office. It will help citizens, visitors, service providers and ward representatives locate important resources and understand the spatial structure of the ward. It will also support ward-level planning, discussion of local priorities, and future updating of the ward resource database.

### Validation and Finalization Note

The Ward No. 11 map was prepared using ward consultation, available base information, Google Earth-based pointing, selected GPS verification and municipal/ward-level review. Corrections

received during validation are incorporated into the final GIS database and print-ready map layout

## 6.15 Ward No. 12 Resource Map

### Brief Ward Background

Ward No. 12 of Gurbhakot Municipality is referenced in secondary documentation as being formed from Former Subhaghat Municipality wards 4-6. Its boundary context is described as follows: East: Wards 10 and 11; west: Wards 13 and 14; north: Simta RM; south: Wards 7 and 8. Ward No. 12 is connected to Ward Nos. 7, 8, 10, 11, 13, 14 and Simta Rural Municipality. Reference data indicates a comparatively large number of other open spaces and educational institutions. The map should be arranged in a way that avoids overcrowding while still presenting important resources, settlements and road links.

### Secondary Resource Count Reference

| Reference Resource Type  | Count |
|--------------------------|-------|
| Educational institutions | 8     |
| Health institutions      | 2     |
| Government offices       | 2     |

These counts are included as secondary reference only. The current resource mapping assignment covers a broader resource inventory and should be updated with the final GIS database values after completion of map insertion and database finalization.

### Mapped Resource Categories

The Ward No. 12 resource map is structured to include settlements and tole/basti names, road network, educational institutions, health facilities, government and public offices, religious and cultural sites, public spaces, utilities, natural features, landmarks and other locally identified resources. During map preparation, local names and ward-level inputs were treated as important map elements because the final board is intended for public use.

### Important Resource and Location Notes

For Ward No. 12, the final map should present important resources in relation to roads, settlements and ward boundary context. Key local resources should be labeled clearly, and overcrowding should be avoided by using appropriate symbol size, label hierarchy and cartographic generalization. Where the final map contains many closely spaced points, labels may be adjusted or grouped to maintain readability.

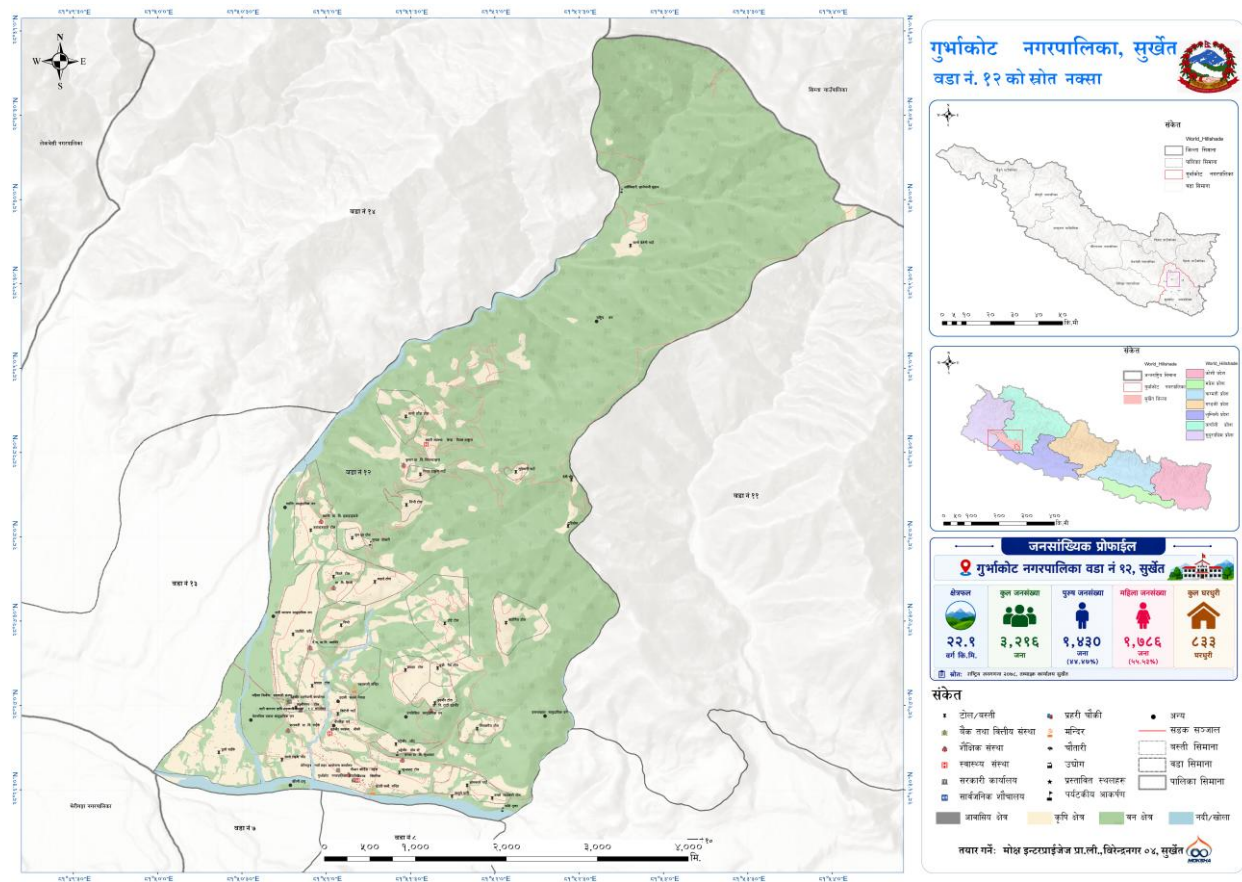

### Map-board Purpose

The Ward No. 12 map board is intended to serve as a public-facing information board at the ward office. It will help citizens, visitors, service providers and ward representatives locate important resources and understand the spatial structure of the ward. It will also support ward-level planning, discussion of local priorities, and future updating of the ward resource database.

### Validation and Finalization Note

The Ward No. 12 map was prepared using ward consultation, available base information, Google Earth-based pointing, selected GPS verification and municipal/ward-level review. Corrections

received during validation are incorporated into the final GIS database and print-ready map layout

## 6.16 Ward No. 13 Resource Map

### Brief Ward Background

Ward No. 13 of Gurbhakot Municipality is referenced in secondary documentation as being formed from Former Subhaghat Municipality wards 7 and 8. Its boundary context is described as follows: East: Ward 12; west: Lekbesi Municipality; north: Ward 14; south: Bheriganga Municipality. Ward No. 13 connects with Lekbesi Municipality and Bheriganga Municipality, making external boundary reference important. The map should show public offices, schools, health facilities, settlements, roads, religious/cultural sites and locally important places. The board will support ward office information sharing and local planning.

### Secondary Resource Count Reference

| Reference Resource Type  | Count |
|--------------------------|-------|
| Educational institutions | 5     |
| Health institutions      | 1     |
| Government offices       | 5     |

These counts are included as secondary reference only. The current resource mapping assignment covers a broader resource inventory and should be updated with the final GIS database values after completion of map insertion and database finalization.

### Mapped Resource Categories

The Ward No. 13 resource map is structured to include settlements and tole/basti names, road network, educational institutions, health facilities, government and public offices, religious and cultural sites, public spaces, utilities, natural features, landmarks and other locally identified resources. During map preparation, local names and ward-level inputs were treated as important map elements because the final board is intended for public use.

### Important Resource and Location Notes

For Ward No. 13, the final map should present important resources in relation to roads, settlements and ward boundary context. Key local resources should be labeled clearly, and overcrowding should be avoided by using appropriate symbol size, label hierarchy and cartographic generalization. Where the final map contains many closely spaced points, labels may be adjusted or grouped to maintain readability.

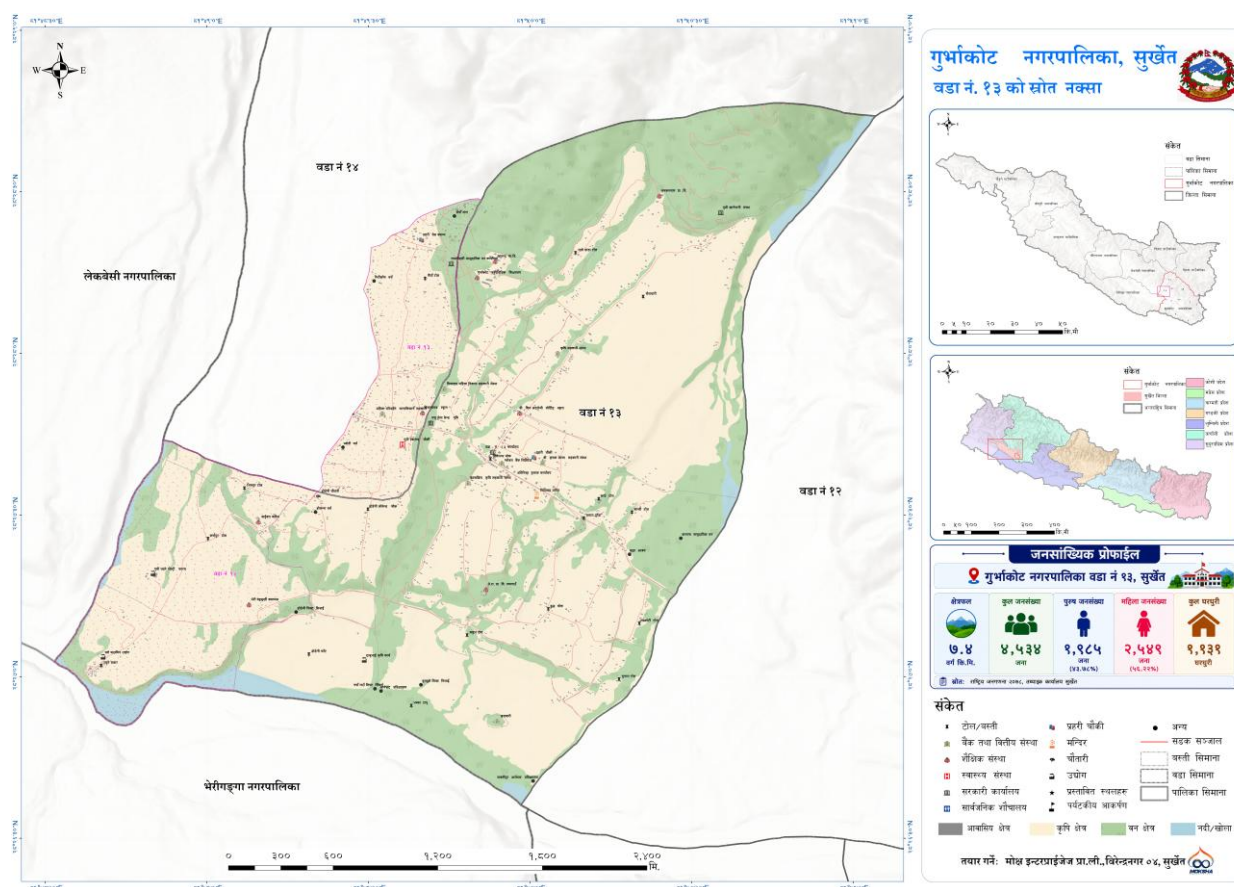

### Map-board Purpose

The Ward No. 13 map board is intended to serve as a public-facing information board at the ward office. It will help citizens, visitors, service providers and ward representatives locate important resources and understand the spatial structure of the ward. It will also support ward-level planning, discussion of local priorities, and future updating of the ward resource database.

### Validation and Finalization Note

The Ward No. 13 map was prepared using ward consultation, available base information, Google Earth-based pointing, selected GPS verification and municipal/ward-level review. Corrections

received during validation are incorporated into the final GIS database and print-ready map layout

## 6.17 Ward No. 14 Resource Map

### Brief Ward Background

Ward No. 14 of Gurbhakot Municipality is referenced in secondary documentation as being formed from Former Subhaghat Municipality wards 9 and 10. Its boundary context is described as follows: East/south: Wards 12 and 13; west: Lekbesi Municipality; north: Chingad RM and Simta RM. Ward No. 14 is located along the northern and western edge of the municipality and connects with Lekbesi Municipality, Chingad Rural Municipality and Simta Rural Municipality. Its map should carefully show boundary context, road access, public facilities, settlements, natural resources and locally important places.

### Secondary Resource Count Reference

| Reference Resource Type  | Count |
|--------------------------|-------|
| Educational institutions | 7     |
| Health institutions      | 4     |
| Government offices       | 3     |

These counts are included as secondary reference only. The current resource mapping assignment covers a broader resource inventory and should be updated with the final GIS database values after completion of map insertion and database finalization.

### Mapped Resource Categories

The Ward No. 14 resource map is structured to include settlements and tole/basti names, road network, educational institutions, health facilities, government and public offices, religious and cultural sites, public spaces, utilities, natural features, landmarks and other locally identified resources. During map preparation, local names and ward-level inputs were treated as important map elements because the final board is intended for public use.

### Important Resource and Location Notes

For Ward No. 14, the final map should present important resources in relation to roads, settlements and ward boundary context. Key local resources should be labeled clearly, and overcrowding should be avoided by using appropriate symbol size, label hierarchy and cartographic generalization. Where the final map contains many closely spaced points, labels may be adjusted or grouped to maintain readability.

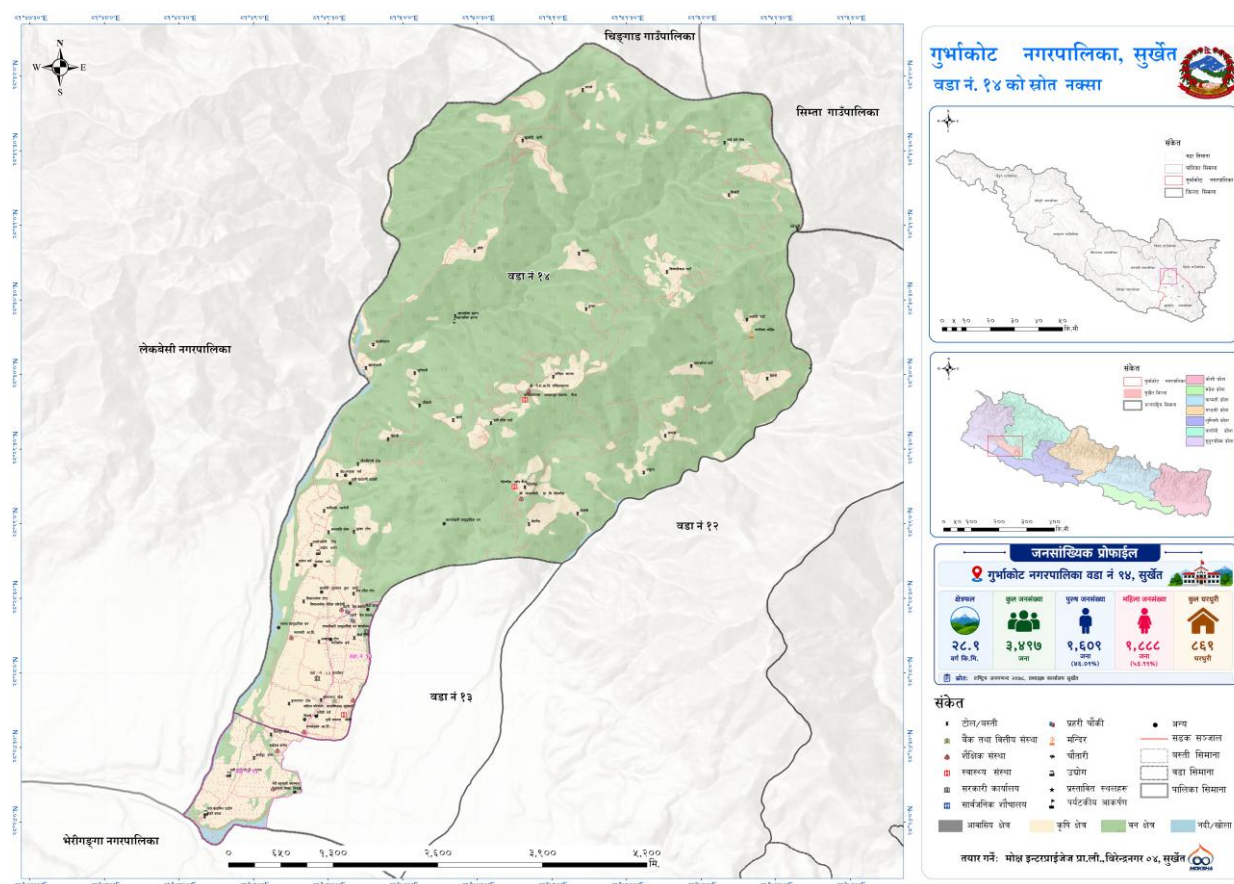

### Map-board Purpose

The Ward No. 14 map board is intended to serve as a public-facing information board at the ward office. It will help citizens, visitors, service providers and ward representatives locate important resources and understand the spatial structure of the ward. It will also support ward-level planning, discussion of local priorities, and future updating of the ward resource database.

### Validation and Finalization Note

The Ward No. 14 map was prepared using ward consultation, available base information, Google Earth-based pointing, selected GPS verification and municipal/ward-level review. Corrections

received during validation are incorporated into the final GIS database and print-ready map layout

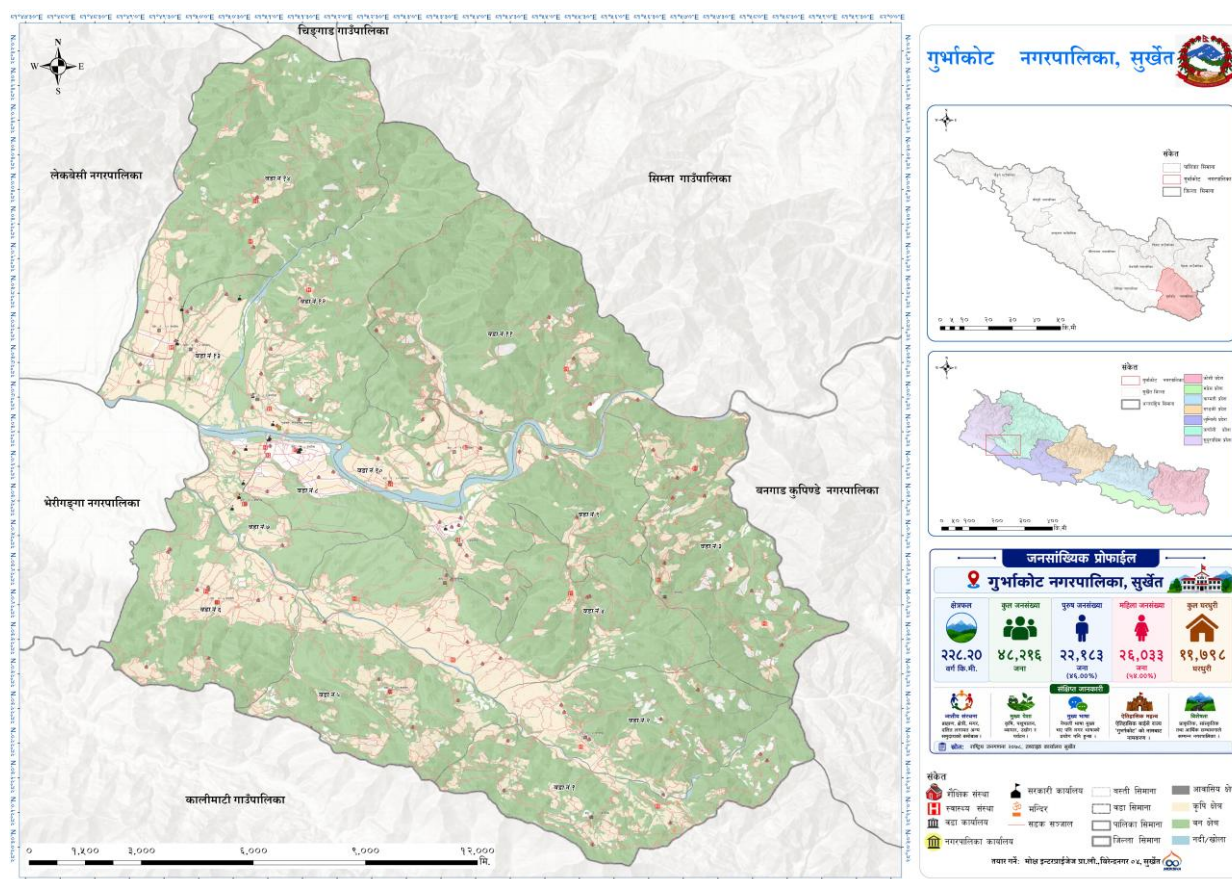

## 6.18 Municipality-level Resource Map

The municipality-level resource map provides an overview of the spatial distribution of important resources across all fourteen wards of Gurbhakot Municipality. Unlike ward-level maps, which show local detail, the municipal map is intended to present the broader resource pattern, road network, ward structure, settlement distribution, and key public facilities of the entire municipality.

The municipality-level map should include municipal boundary, ward boundaries, major road network, major rivers and natural features, key settlements and local place names, major educational institutions, major health facilities, government and public offices, religious, cultural and community resources, important landmarks and public facilities, and resource categories summarized from ward-level data.

The municipal overview map is useful for the municipal office, planning section, technical section, elected representatives, visitors, and development partners. It provides a single visual reference for understanding the overall spatial structure and resource distribution of Gurbhakot Municipality.

## 6.19 Summary of Ward-wise Mapping Outputs

The ward-wise resource maps and municipality-level overview map prepared under this assignment provide a practical spatial information base for Gurbhakot Municipality. These maps bring together local knowledge, field verification, ward consultation, GIS database preparation, and cartographic design into public-facing outputs.

The major value of the ward-wise maps is that they make local information visible. Each ward office now has a map board that can help citizens, visitors, officials, and planning teams identify important places and understand the local spatial context. The maps also provide a starting point for future updating, digital integration, and improved ward-level planning.

The outputs of this chapter should be read together with the final GIS database, installed map boards, and annexed ward-wise resource inventory. As new resources are developed and existing information changes, the Municipality is recommended to update the GIS database and revise the maps periodically.

## CHAPTER 7: MAP LAYOUT, DESIGN AND VISUALIZATION

### 7.1 Purpose of Map Layout Design

Map layout design converts GIS data into a readable public information product. In this assignment, layout design was not treated as a cosmetic activity; it was a core technical process because the final output was a map board intended for public display. A technically accurate map may still fail if ordinary users cannot read labels, recognize symbols, or understand the relationship between roads, settlements and facilities. Therefore, map layout preparation focused on readability, simplicity, consistency, and practical use.

The map layout had to serve multiple audiences at the same time. Ward representatives need the map for planning and discussion. Municipal officials need it as a reference tool. Citizens and visitors need it as an information board. Technical users need it as an output linked to the GIS database. The design therefore needed to balance technical correctness with public clarity.

### 7.2 Base Map Selection and Visualization Approach

A modified OSM-based base map was selected because it provided useful road, settlement and place-name references. However, the base map was adjusted to avoid excessive background detail. Roads, settlements, rivers, ward boundaries and key reference features were retained, while unnecessary features were reduced or visually softened.

The base map acts as the background framework on which resource points are displayed. It helps users understand where resources are located in relation to roads, rivers, settlements and ward boundaries. The base map also supports orientation for people who are not familiar with GIS but can recognize roads and local places.

### 7.3 Symbolology and Legend Design

The symbols and legend were designed to classify resources into understandable categories. Symbol design focused on category distinction, visibility at map-board scale, and consistency across all wards. The same broad symbol logic should be used in every ward map so that users can read one map and understand the others easily.

Resource categories such as education, health, government/public offices, religious/cultural sites, settlements, utilities, roads, natural features, and landmarks should be visually distinguishable. The legend should be placed in a clear location and should avoid unnecessary complexity.

### 7.4 Labeling and Generalization

Labeling is one of the most sensitive parts of map-board design. Too many labels can make the map unreadable, while too few labels can reduce its usefulness. Therefore, label placement should prioritize important places, ward-level resources, roads, settlements and public facilities.

Where resources are closely located, labels may need to be shifted, stacked, reduced, or selectively displayed. For dense areas, cartographic generalization is necessary to maintain public readability. The aim is not to show every text at equal importance but to create a balanced visual hierarchy.

## 7.5 Ward Boundary and Road Network Presentation

Ward boundaries should be shown clearly because the map is ward-specific and must help users understand the administrative extent of each ward. Adjoining ward boundaries and neighboring municipalities or rural municipalities may also be shown as reference where useful.

Road network presentation is important because roads are the main reference system for locating resources. Roads should be shown with visual hierarchy where possible, distinguishing major roads, local roads and access tracks if the data allows. Junctions, bridges and important access routes should be visible enough to guide local understanding.

## 7.6 Resource Point Display and Category-wise Mapping

Resource points should be displayed according to category, importance and visibility. Points should not be so large that they hide the base map, and they should not be so small that users cannot see them on the installed map board. Category-wise mapping helps users quickly identify schools, health facilities, government offices, settlements, religious places and other public resources.

Point placement should be checked carefully after validation. When a point has been collected through ward consultation and later verified through GPS or field observation, the most accurate location should be used. Where the location remains approximate, the database should record the source and verification status.

## 7.7 Inset Maps, Scale, North Arrow and Map Elements

Each map layout should contain standard cartographic elements including title, legend, scale bar, north arrow, inset map, coordinate/grid reference where suitable, data source note, client/consultant details, and date/version reference. These elements make the map more complete and professional.

Inset maps help users understand where the ward is located within Gurbhakot Municipality and where the municipality lies within the district or wider region. Scale and north arrow support orientation. Source notes help clarify data responsibility and support transparency.

## 7.8 Final Map Board Design Standard

The final map board design standard should ensure consistency across all ward offices. Although each ward map differs in shape, resource density and settlement pattern, the overall structure, legend system, map title, logo placement, color scheme and cartographic elements should remain consistent.

The final map-board design should be durable, readable from a practical viewing distance, and visually clear. The map board should not be overloaded with long text. Essential information should be placed in the map layout, while detailed resource inventory can be kept in the report annex or digital database.

## CHAPTER 8: VALIDATION, CORRECTION AND FINALIZATION

### 8.1 Draft Map Review Process

Draft map review was conducted after the initial GIS database and map layouts were prepared. The review process allowed municipal officials, ward representatives and technical staff to check whether the mapped resources, names, locations, labels and categories reflected local reality.

The review process is a critical step in participatory resource mapping because local users are often the best source for confirming local names, resource importance and missing places. Even if a point is technically mapped, it may still require correction if the local name, category or public understanding differs from the initial record.

### 8.2 Feedback from Municipality and Ward Representatives

Feedback from municipality and ward representatives was collected on resource names, missing places, settlement labels, road representation, symbol display, map readability and overall map-board suitability. Some feedback related to spelling correction, while other feedback related to adding locally important places that were missing from the draft output.

The feedback process also helped improve local ownership. When ward representatives see that their corrections are included, they are more likely to use and maintain the map board.

### 8.3 Correction of Resource Names and Locations

Corrections were made in the GIS database and map layout based on review feedback. Resource names were standardized but local identity was preserved wherever possible. Where a resource had both an official and local name, the map label was selected based on public recognition and available space.

Location corrections were made using available base maps, Google Earth, GPS points and local validation. For some resources, exact coordinates may require future improvement, but the final location was prepared as accurately as possible within the assignment scope.

### 8.4 Final Database Update

After map corrections, the GIS database was updated so that the final map layout and digital data remain consistent. This is important because if only the map image is corrected but the GIS database is not updated, future users may face inconsistencies.

The final database update included corrected names, revised categories, adjusted coordinates, removed duplicates, added missing points and updated remarks or verification status where needed.

### 8.5 Final Map Approval and Printing

After corrections were completed, final map layouts were prepared for printing. The layouts were checked for title, legend, labels, map scale, north arrow, inset map, resource symbols, ward boundary, road network, and overall visual balance. Print-ready files were then prepared for map-board production.

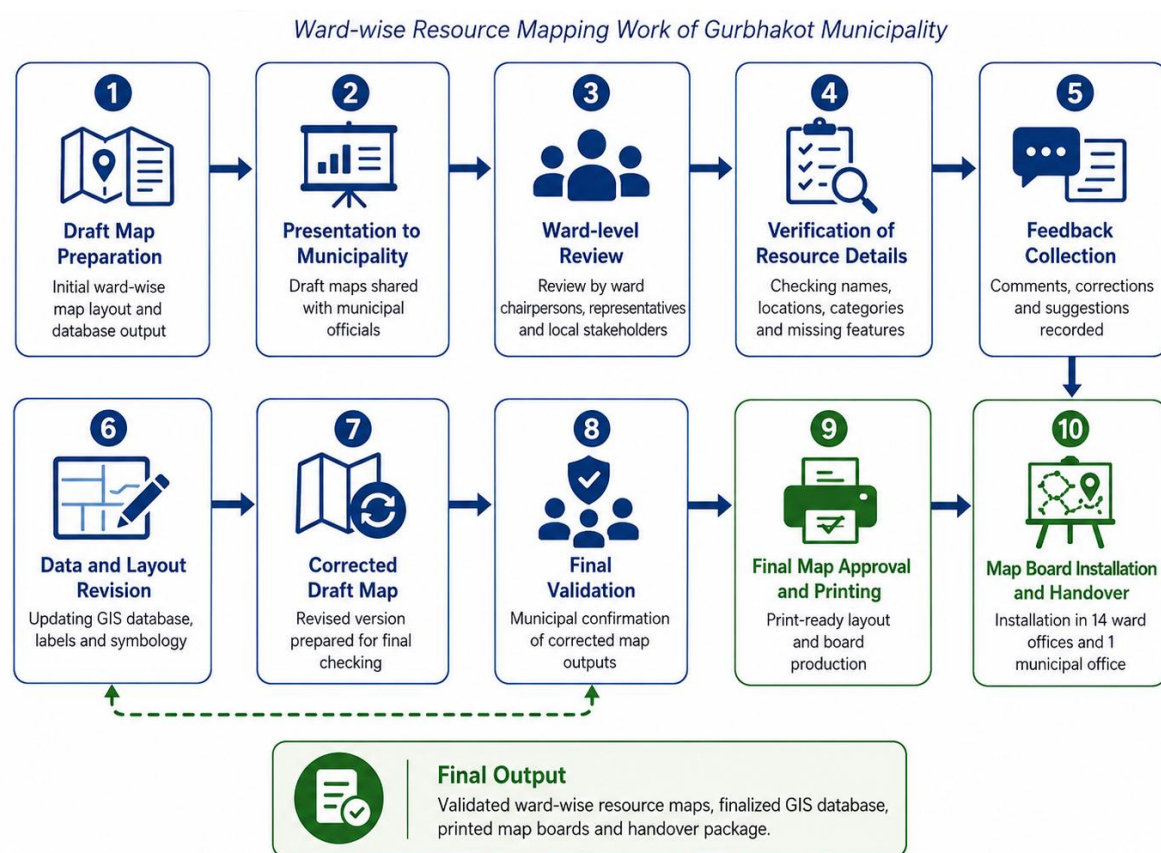

The final approval process should be treated as the point at which the Municipality confirms that the map is suitable for public display and installation. If exported ward-wise maps are inserted later into this report, the same approved versions should be used.

## 8.6 Installation of Map Boards

The printed map boards were installed in the designated ward offices and municipal office. Installation converted the GIS and map-layout work into visible public information infrastructure. The installed boards are expected to remain useful beyond the report submission period.

After installation, ward offices should protect the boards from damage and should inform the Municipality if major corrections or updates are required in the future.

**Figure 3: Map Validation and Finalization Process**

| Validation Stage          | Main Activity                            | Result                        |
|---------------------------|------------------------------------------|-------------------------------|
| Draft preparation         | Initial map and database prepared        | Draft ward-wise maps          |
| Ward/municipal review     | Local feedback collected                 | Correction list               |
| Database update           | Names, locations and categories revised  | Updated GIS database          |
| Layout finalization       | Symbols, labels and map elements refined | Print-ready maps              |
| Printing and installation | Map boards produced and installed        | Public-facing resource boards |

## CHAPTER 9: FINAL DELIVERABLES AND HANDOVER

### 9.1 Ward-wise Resource Maps

The assignment produced ward-wise resource maps for all fourteen wards of Gurbhakot Municipality. Each ward map is intended to show important local resources, settlements, roads, public facilities, institutions and landmarks in a clear public-facing format. The maps are designed for display at ward offices and for use during planning discussions.

### 9.2 Municipality-level Resource Map

One municipality-level resource map was prepared to show the overall spatial structure and resource distribution of Gurbhakot Municipality. This map is intended for the municipal office and provides a broader overview of ward boundaries, road network, major settlements and important resource points across the municipality.

### 9.3 GIS Database and Digital Data Files

The GIS database is the main editable digital output of the assignment. It contains resource point data, attribute information, ward-wise organization and supporting spatial layers. The database should be preserved by the Municipality because it can be updated and reused for future maps, digital profile development and municipal GIS systems.

### 9.4 Print-ready Map Layouts

Print-ready map layouts were prepared for ward-level and municipality-level map boards. These layouts should be stored carefully in digital format so that the Municipality can reprint, revise or resize the maps in future if needed.

### 9.5 Installed Map Boards

The visible physical output of the assignment is the installed map boards: one at each of the fourteen ward offices and one at the municipal office. These map boards should be treated as public information assets of the Municipality.

### 9.6 Final Report

This final report documents the background, methodology, data sources, resource categories, ward-wise outputs, validation process, deliverables, handover, limitations, recommendations and future update mechanism of the assignment. It also provides placeholders for inserting exported final ward maps and annex materials.

### 9.7 Handover of Digital and Physical Outputs

All final outputs should be handed over to Gurbhakot Municipality in organized digital and physical form. The digital folder should contain GIS database, map layouts, exported maps, resource inventory tables, final report and supporting files. Physical handover should include installed boards, final report and any printed supporting documents agreed with the Municipality.

| Deliverable | Recommended Handover Format | Remarks |
|-------------|-----------------------------|---------|
|-------------|-----------------------------|---------|

|                          |                                     |                                      |
|--------------------------|-------------------------------------|--------------------------------------|
| Ward-wise resource maps  | PDF/JPEG/print-ready layout files   | One for each ward                    |
| Municipality-level map   | PDF/JPEG/print-ready layout file    | For municipal office                 |
| GIS database             | Shapefile/geodatabase/project files | Editable future use                  |
| Resource inventory       | Excel/CSV and GIS attribute table   | Ward-wise organization               |
| Final report             | DOCX and PDF                        | Maps may be inserted before printing |
| Installation photographs | Image folder                        | For annex and record                 |
| Handover checklist       | Signed physical/digital checklist   | For closure documentation            |

## CHAPTER 10: USE, MAINTENANCE AND FUTURE UPDATE

### 10.1 Practical Use of Resource Map Boards

The installed map boards should be used as public information boards at ward offices and the municipal office. They can support daily public interaction, visitor orientation, ward meetings, planning discussions, community consultation and development prioritization. A map board becomes more useful when ward officials actively refer to it during discussions.

### 10.2 Use of GIS Database by Municipality

The GIS database should be stored as an official municipal spatial dataset. It can be used to update resource points, prepare revised maps, support future thematic mapping, develop digital profiles and integrate resource information into web-GIS or municipal information systems. The Municipality should assign a focal person or section for storing and updating the database.

### 10.3 Recommended Update Mechanism

Resource maps should not be treated as one-time products. Roads, institutions, settlements, public facilities, service centers and utilities change over time. The Municipality should therefore maintain an update mechanism. At minimum, ward offices should report new resources, changed names, relocated facilities and removed resources annually. The technical section can then update the GIS database and revise the maps when required.

### 10.4 Role of Ward Offices in Future Updating

Ward offices are closest to the local community and are therefore best positioned to identify changes in resource information. Each ward office should maintain a simple update register where new roads, institutions, settlements, public buildings, utilities, religious/cultural sites, community facilities and important landmarks are recorded.

### 10.5 Data Ownership and Confidentiality

All data, maps, reports and database outputs produced under this assignment are the property of Gurbhakot Municipality. The outputs should be used for municipal planning, public information and official reference. Any external use of GIS data or map files should be done with approval of the Municipality.

### 10.6 Recommendations for Future Digital Integration

The GIS database prepared under this assignment can support future digital profile development, municipal web map, interactive dashboard, mobile data collection and periodic spatial planning. If the Municipality develops a digital profile or web-GIS platform in the future, the ward-wise resource layers can be integrated as an important base dataset. Additional layers such as population, service coverage, infrastructure condition, disaster risk, land use, tax zones or development projects can be added later.

| Update Item                            | Responsible Level               | Suggested Frequency     |
|----------------------------------------|---------------------------------|-------------------------|
| New public institutions and facilities | Ward office / municipal section | Annual                  |
| Road network changes                   | Ward office / technical section | Annual or project-based |

|                                        |                                      |                                             |
|----------------------------------------|--------------------------------------|---------------------------------------------|
| Settlement/tole/basti name corrections | Ward office                          | As needed                                   |
| Health and education facility updates  | Relevant municipal sections          | Annual                                      |
| New utilities and community assets     | Ward office / technical section      | Annual                                      |
| GIS database revision                  | Municipal technical/GIS focal person | After ward updates                          |
| Map board revision/reprint             | Municipality                         | Every 2-3 years or when major changes occur |

## CHAPTER 11: CONCLUSION AND RECOMMENDATIONS

### 11.1 Conclusion

The Ward-wise Resource Mapping Work of Gurbhakot Municipality has produced a practical spatial information base for the Municipality and its fourteen wards. The assignment focused on identifying important ward-level resources, collecting point-based location information, organizing the data into a GIS database, preparing readable map layouts, validating the outputs with municipal and ward-level stakeholders, and installing map boards at ward offices and the municipal office.

The assignment should be understood as a resource identification and public map-board preparation work, not as a detailed research or sectoral analysis project. Its strength lies in making local information visible and spatially organized. The maps help answer basic but important questions: what resources exist in each ward, where they are located, and how they relate to roads, settlements and public facilities.

The project has also converted local knowledge into a more formal GIS-based structure. Through ward consultation, Google Earth-based pointing, selected GPS verification and municipal validation, resource information that was previously scattered across local knowledge and records has been organized into map and database form. This provides a foundation for future updating and digital integration.

### 11.2 Key Recommendations

Gurbhakot Municipality should preserve the GIS database as an official municipal spatial asset and ensure that it is not lost after report submission. Ward offices should maintain a simple update register and report changes to the Municipality at least once a year. The municipal technical section should periodically update the GIS database and re-export maps when major changes occur.

Future mapping updates should include additional resource categories if required by the Municipality, including banks and financial institutions, telecommunication facilities, tourism facilities, cultural sites, industries, bridges, warehouses, disaster response points, drinking water schemes, irrigation structures, agriculture pockets and other municipal priority layers.

If budget allows, the Municipality may gradually integrate the resource database into a digital municipal profile or web-GIS system. This will allow users to view, update and analyze spatial information more dynamically. The printed map boards will continue to serve public display needs, while the digital system can support technical use.

The Municipality should also establish a map-board maintenance system. Boards should be protected from physical damage, fading and weather exposure as far as possible. If any board is damaged or becomes outdated, the Municipality can use the stored print-ready map files to reprint or revise it.

### 11.3 Way Forward

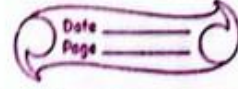

The way forward is to treat this resource mapping output as a living information system rather than a one-time report. The first step is to approve and archive the final GIS database, map layouts

and report. The second step is to make sure that ward offices understand how to use the map boards and how to report updates. The third step is to periodically revise the database and maps based on new information.

In the future, the Municipality can expand this work into a more advanced municipal spatial information system. Possible future improvements include integration with municipal digital profile, development of ward-wise map atlas, linking resources with photographs and descriptions, preparing thematic maps for planning, and using mobile data collection for updates. With these steps, the resource mapping work can continue to support public information, local planning, transparency and evidence-based municipal governance.

## ANNEXES

### Annex 1: Minutes and Photographs

आज मिति २०८३ च्याल जेठ २० गतेका दिन यस गुरभाकट नगरपालिका  
स्थित कार्यक्रम अनुसार वडागत Resource Map-निर्माण अभियान  
मोक्षा संस्कार प्राइमेट द्वारा कार्यक्रमको अभिमुखीकरण गिाव समेतीका  
उपस्थितिमा उपस्थितिमा सम्पन्न गरियो ।

### ANNEX 3: COLLECTED POI DATA SHEET

This annex presents the complete point of interest (POI) sheet compiled during the ward-wise resource mapping assignment. The sheet contains resource points identified through ward-level consultation, map-based interpretation, field verification, GPS-supported collection where required, and subsequent GIS database preparation. The table is attached as a direct annex inventory and will serve as the primary source for final ward-wise map layouts and future municipal database updating.

**Source sheet: Sheet1 | Total records: 849 POI entries**
